Since the release of the first edition of 1000 x European Architecture in 2006, the world of architecture has gone through some major changes: in the midst of an seemingly unstoppable building boom the banking crisis descended on the world economy in 2008, but since 2010 a spirit of optimism has taken hold again. A completely new impact for the world of architecture, which is gaining in significance, is the Web 2.0 and the rapidly increasing influence of social media. The vehement debates about style at the end of the 20th century have faded away, instead the questions of quality in execution, valence of the material and especially ecological sustainability have moved to the foreground of the discussions. The new edition of the bestseller 1000 x European Architecture presents the European building culture during this tumultuous time with 1000 projects from the last five years.

This second volume in the series Collection of Architecture that started very successfully with 1000 x European Architecture presents the diversity of European hotels today. The wide range of hotel types is shown with opulent illustrations, plans and drawings as well as a short description. 1000x European Hotels reveals what unites and divides European hotels by exploring its variety with regard to style, architecture and design: famous Grand Hotels, stylish business accommodations, innovative youth hostels, superb country houses, romantic bed & breakfasts, extravagant luxury hotels as well as quite unusual places such as a timbered tree house, a former jail, a cave or a repurposed drain pipe.

Architecture and Language examines one of the central themes in the history and theory of Western architecture. Seeking to understand how language provides a model for understanding architecture, the essays in this volume both celebrate the diversity of the language-architecture analogy and assess its theoretical implications in the light of the diverse historical circumstances that produced it. The chapters examine the connections between style and nationality, vernacular and "official" languages, the importance of Latin in giving the architectural profession a literate and cultured status, and the influence of architectural description on perception and design.

The building of religious structures represents a rare opportunity for the architect to concentrate on the creation of volume, space, and form. Sacred architecture is far less determined than other building tasks by functional requirements, norms, and standards. As a rule, it is free to unfold as pure architecture. Thus in design terms this building task offers enormous freedoms to the architect. At the same time, however, the special atmospherics of sacred spaces call, on the part of the architect, for a highly sensitive treatment of religion and the relevant cultural and architectural traditions. In a systematic section, this volume introduces the design, technical, and planning fundamentals of building churches, synagogues, and mosques. In its project section, it also presents about seventy realized structures from the last three decades. Drawing upon his in-depth knowledge of the subject and his many years of publishing experience, the author offers a valuable analysis of the conceptual and formal aspects that combine to create the religious impact of spaces (e.g., the ground plan, the shapes of the spaces, the incidence of light, and materiality).

Landscape architecture covers the entire range of outdoor design: the fascinating scope of this field ranges from open space planning near, on or even inside buildings to self-sufficient creations in residential areas or in the open nature, and Land Art that uses nature as "raw material" for a work of art. The different geographical and social contexts shape the design of the creative and playful solutions applied to 1000 projects from around the world. While the main focus are parks and gardens, this publication also presents numerous other types of categories such as greened façades, stone gardens, memorials and waterscapes.

Todd Saunders (1969) is one of the most important young contemporary Canadian architects working internationally. His architecture, simple yet powerful, incorporates elements of his country's architectural identity – including the use of wood and carefully picked Modernist influences – bringing it at the same time into the 21st century with excellent execution, carefully chosen materials and a hands-on approach. Saunders (he lives and works in Bergen, Norway) has successfully executed work in both Canada, Norway, and Finland, creating architecture with a strong sense of northern identity, an individual approach that is informed by the strongness of natural landscape. The most important projects: Aurland Lookout, Long Studio, Fogo Island, Tower Studio, Fogo Island, Squish Studio, Fogo Island and Villa G. The first reference monograph on a remarkable young architect working in Scandinavia and Canada. The monograph provides interesting unpublished documents, curated by Jonathan Bell (Architecture Editor, Wallpaper* magazine) and Ellie Stathaki (Deputy Architecture Editor, Wallpaper* magazine) as well as three interviews by Olaf Gipser, Zita Cobb, and Brian MacKay-Lyons. The artwork of the book is by the international renowned graphic designer Henrik Nygren.

In analyzing the early medieval architecture of Christian and Islamic Spain, Jerrilynn Dodds explores the principles of artistic response to social and cultural tension, offering an account of that unique artistic experience that set Spain apart from the rest of Europe and established a visual identity born of the confrontation of cultures that perceived one another as alien. Architecture and Ideology in Early Medieval Spain covers the Spanish medieval experience from the Visigothic oligarchy to the year 1000, addressing a variety of cases of cultural interchange. It examines the embattled reactive stance of Hispano-Romans to their Visigothic rulers and the Asturian search for a new language of forms to support a political position dissociated from the struggles of a peninsula caught in the grip of a foreign and infidel rule. Dodds then examines the symbolic meaning of the Mozarabic churches of the tenth century and their reflection of the Mozarabs' threatened cultural identity. The final chapter focuses on two cases of artistic interchange between Islamic and Christian builders with a view toward understanding the dynamics of such interchange between conflicting cultures. Dodds concludes with a short account of the beginning of Romanesque architecture in Spain and an analysis of some of the ways in which artistic expression can reveal the subconscious of a culture.

Contemporary Problems of Architecture and Construction 2020 includes contributions on various complex issues and aspects of engineering and construction of buildings and structures, protection, reconstruction and restoration of architecture, as well as intellectualization of energy and safety systems functioning urban development. The contributions were presented at the eponymous conference (ICCPAC 2020, St Petersburg, Russia, November 25-26, 2020), and cover a wide range of topics: Urban development: problems of urban construction and architecture Engineering, construction and operation of buildings and structures Implementation of building information modeling (BIM) and geo-information systems (GIS) technologies in the construction industry Energy efficiency of buildings and maintenance systems Engineering technologies of sustainable nature management and environmental protection Intellectualization and algorithmization of large cities road safety systems functioning Economics and management in construction and public utility services. Contemporary Problems of Architecture and Construction 2020 will be of interest to academics and professionals involved in the urban development, engineering technologies, architecture and construction, economics and management in construction industry.

This volume is part of the successful book series "Collection of Architecture," an unparalleled resource that presents 1000 outstanding and creative projects from 1000 acclaimed and emerging architects revamping the architectural legacies of the past throughout the Americas. Comprised of varying typologies and split by numerous cultural and historical differences, North, Central and South America offer a plethora of innovative trends in the field of contemporary architecture. Stunning photography, informative texts and a comprehensive index are enclosed.
