This book focuses on difficulties and opportunities in revitalization of old, derelict or abandoned buildings into a library and investigates the transformation of buildings which originally had a different purpose. The publication shows worldwide best practice examples from different types of libraries in historic environments, both urban and rural, while maintaining a focus on sustainability concerning the architecture and interior design.

This volume gathers the textual, iconographic and palaeographic evidence and examines artefacts in order to revise the common view on the use of copper alloy tools and model tools in the Old Kingdom.

This new book addresses a gap in the literature, offering an explanation of the aurora's causes, how the occurrence of major events may now be predicted, and how amateur observers can go about recording displays. This is the first serious book about aurora written for practical but non-professional observers. It provides a concise accessible description of the various auroral forms and how to record them, illustrated with color images of recent displays. It contains details of 'Space Weather' forecasting websites, how to interpret and use the information given on these, and how to anticipate auroral activity.
