This book is the first to describe in detail a community of potters working for the Jagannatha Temple in Puri, and to explore how the role of temple servant affects the potters' understanding of their work and of themselves. As a pilgrimage centre of national importance, supported by the patronage of successive regional dynasties and by fervent popular belief, the Jagannatha Temple requires earthenware in great quantities for the creation and distribution of the sacred food that is an integral feature of daily ritual and pilgrimage. Three hundred potters participate as temple servants in maintaining the temple's ritual cycle by performing their divinely assigned task. This study, conducted in 1979-1981, observes the potters' technical prowess, sustained by devotion, but also examines the tensions within their relationships to more powerful temple servants and authorities. The role of the potter as temple servant is at once glorious, as demonstrated by texts and personal interpretations of the potters' divinely-appointed service, and pathetic, as shown in the brutality of caste-based hierarchy and cash-based exchange penetrating the modern temple's daily operations.

For the interviewer, Beyond A Gut Feeling is the essential tool for asking the right questions, in the right way, to hire the right talent. It begins by helping the reader question using gut feelings for selection. Instead, a behavioral interviewing approach is recommended to minimize errors, improve prediction, and build defensibility. Special attention is given to using an interviewing system that will coordinate interviews and present a consistent strategy. It begins with a job analysis and continues through developing interview questions, guiding the interview, rating answers, and making a decision. All of this is offered with a sensitivity to giving each candidate respect and dignity. This book is a must for the corporate customer and libraries.

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed: a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, Vox "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

A revealing study of scientific failure provides twelve shocking stories drawn from a range of scientific fields, ranging from a surprise hurricane that makes violent landfall despite forecasters claims that it does not exist, to a team of scientists that ignores signs of an imminent eruption to hike into a supposedly dormant volcanic crater. Original.
