The introduction of alien species can upset ecosystems and have been identified as the second main cause of species extinction at a global level after habitat loss or deterioration. This publication sets out a European strategy to address this issue, developed in the framework of the Bern Convention and in line with guidelines adopted in 2002 on biological diversity. This strategy seeks to encourage the implementation of co-ordinated measures in all European states which are designed to prevent or minimise adverse impacts of non-native species on native biological diversity.

Start your journey into the human body with cells, bones and muscles. Our resource takes you through a fascinating study of anatomy with current information. Begin with cells, the building blocks of life. Build your own cell by sculpting the different parts. Move into tissues, organs and systems to discover all the different systems that make the human body function. Next is the skeletal system. Invent your own alien skeleton using the different bones found in the human body. Understand that these bones are held together with joints and cartilage. Finally, end this part of the journey with the muscular system. Find out the difference between skeletal, smooth and cardiac muscles before identifying voluntary and involuntary muscle movement. Aligned to the Next Generation State Standards and written to Bloom's Taxonomy and STEAM initiatives, additional hands-on experiments, crossword, word search, comprehension quiz and answer key are also included.

DISCOVER HOW LIFE REALLY WORKS - ON EARTH AND IN SPACE 'A wonderfully insightful sidelong look at Earthly biology' Richard Dawkins 'Crawls with curious facts' Sunday Times \_\_\_\_\_ We are unprepared for the greatest discovery of modern science. Scientists are confident that there is alien life across the universe yet we have not moved beyond our perception of 'aliens' as Hollywood stereotypes. The time has come to abandon our fixation on alien monsters and place our expectations on solid scientific footing. Using his own expert understanding of life on Earth and Darwin's theory of evolution - which applies throughout the universe - Cambridge zoologist Dr Anik Kershenbaum explains what alien life must be like. This is the story of how life really works, on Earth and in space. \_\_\_\_\_ 'An entertaining, eye-opening and, above all, a hopeful view of what - or who - might be out there in the cosmos' Philip Ball, author of Nature's Patterns 'A fascinating insight into the deepest of questions: what might an alien actually look like' Lewis Dartnell, author of Origins 'If you don't want to be surprised by extraterrestrial life, look no further than this lively overview of the laws of evolution that have produced life on earth' Frans de Waal, author of Mama's Last Hug

Today many school students are shielded from one of the most important concepts in modern science: evolution. In engaging and conversational style, Teaching About Evolution and the Nature of Science provides a well-structured framework for understanding and teaching evolution. Written for teachers, parents, and community officials as well as scientists and educators, this book describes how evolution reveals both the great diversity and similarity among the Earth's organisms; it explores how scientists approach the question of evolution; and it illustrates the nature of science as a way of knowing about the natural world. In addition, the book provides answers to frequently asked questions to help readers understand many of the issues and misconceptions about evolution. The book includes sample activities for teaching about evolution and the nature of science. For example, the book includes activities that investigate fossil footprints and population growth that teachers of science can use to introduce principles of evolution. Background information, materials, and step-by-step presentations are provided for each activity. In addition, this volume. Presents the evidence for evolution, including how evolution can be observed today. Explains the nature of science through a variety of examples. Describes how science differs from other human endeavors and why evolution is one of the best avenues for helping students understand this distinction. Answers frequently asked questions about evolution. Teaching About Evolution and the Nature of Science builds on the 1996 National Science Education Standards released by the National Research Council—and offers detailed guidance on how to evaluate and choose instructional materials that support the standards. Comprehensive and practical, this book brings one of today's educational challenges into focus in a balanced and reasoned discussion. It will be of special interest to teachers of science, school administrators, and interested members of the community.

This open access book describes the serious threat of invasive species to native ecosystems. Invasive species have caused and will continue to cause enormous ecological and economic damage with ever increasing world trade. This multi-disciplinary book, written by over 100 national experts, presents the latest research on a wide range of natural science and social science fields that explore the ecology, impacts, and practical tools for management of invasive species. It covers species of all taxonomic groups from insects and pathogens, to plants, vertebrates, and aquatic organisms that impact a diversity of habitats in forests, rangelands and grasslands of the United States. It is well-illustrated, provides summaries of the most important invasive species and issues impacting all regions of the country, and includes a comprehensive primary reference list for each topic. This scientific synthesis provides the cultural, economic, scientific and social context for addressing environmental challenges posed by invasive species and will be a valuable resource for scholars, policy makers, natural resource managers and practitioners.

Praise for Microaggressions in Everyday Life "In a very constructive way, Dr. Sue provides time-tested psychological suggestions to make our society free of microaggressions. It is a brilliant resource and ideal teaching tool for all those who wish to alter the forces that promote pain for people." —Melba J. T. Vasquez, PhD, ABPP President, American Psychological Association "Microaggressions in Everyday Life offers an insightful, scholarly, and thought-provoking analysis of the existence of subtle, often unintentional biases, and their profound impact on members of traditionally disadvantaged groups. The concept of microaggressions is one of the most important developments in the study of intergroup relations over the past decade, and this volume is the definitive source on the topic." —John F. Dovidio, PhD Professor of Psychology, Yale University "Derald Wing Sue has written a must-read book for anyone who deals with diversity at any level. Microaggressions in Everyday Life will bring great rewards in understanding and awareness along with practical guides to put them to good use." —James M. Jones, PhD Professor of Psychology and Director of Black American Studies, University of Delaware "This is a major contribution to the multicultural discourse and to understanding the myriad ways that discrimination can be represented and its insidious effects. Accessible and well documented, it is a pleasure to read." —Beverly Greene, PhD, ABPP Diplomate in Clinical Psychology and Professor of Psychology, St. John's University A transformative look at covert bias, prejudice, and discrimination with hopeful solutions for their eventual dissolution Written by bestselling author Derald Wing Sue, Microaggressions in Everyday Life: Race, Gender, and Sexual Orientation is a first-of-its-kind guide on the subject of microaggressions. This book insightfully looks at the various kinds of microaggressions and their psychological effects on both perpetrators and their targets. Thought provoking and timely, Dr. Sue suggests realistic and optimistic guidance for combating—and ending—microaggressions in our society.
