Reproductive System - Concord-Carlisle High School  
The female reproductive system functions to produce gametes and reproductive hormones, just like the male reproductive system; however, it also has the additional task of supporting the developing fetus and delivering it to the outside world. Unlike its male counterpart, the female reproductive system is located primarily inside the pelvic cavity.

Anatomy and Physiology of the Female Reproductive System ...  
An female ' s internal reproductive organs are the vagina, uterus, fallopian tubes, cervix, and ovary. External structures include the mons pubis, pudendal cleft, labia majora and minora, vulva, Bartholin ' s gland, and the clitoris. The female reproductive system contains two main parts: the uterus, which hosts the developing fetus, produces vaginal and uterine secretions, and passes the anatomically male sperm through to the fallopian tubes; and the ovaries, which produce the anatomically ...
