Now that this book is being published as part of Hartinus Nijho's 'Studies in Industrial Organization'. I should like to point out two factors which strongly influenced the study. There would have been no project on this scale if the Peace Research committee of the Free University, Amsterdam, had not commissioned a major empirical investigation into Western Europe's defence industries and provided the funds and facilities needed to carry it out. I am grateful for this, for the committee's confidence and its patience, and for the unfailing support of the secretaries at the Department of International Relations. The study was also submitted and approved as a doctoral dissertation at the Free

University. I am deeply indebted to my supervisors, H.W. de Jong (University of Amsterdam). A.J. Vermaat (Free University), and G. Junne (University of Amsterdam). who gave me all the guidance and the encouragement I needed. to H. Coppens and G. Faber. who were a constant source of advice and support. and to N. income mathematics or of equity derivatives and therefore have no idea how to incorporate credit and equity together into their existing pricing tools. Part I of the book covers the impact that the 2008 credit crunch has had on the markets, it then shows how to build up a convertible bond and introduces the reader to the traditional convertible vocabulary of yield to put, premium, conversion ratio, delta, gamma, vega and parity. The market of stock borrowing and lending will also be covered in detail. Using an intuitive approach based on the Jensen inequality, the authors will also show the advantages of using a hybrid to add value - pre 2008, many investors labelled convertible bonds as 'investing with no downside', there are of course plenty of 2008 examples to prove that they were wrong. The

authors then go onto give a complete explanation of the different features that can be embedded in convertible bond. Part II shows readers how to price convertibles. It covers the different parameters used in valuation models: credit spreads, volatility, interest rates and borrow fees and Maturity. Part III covers investment strategies for equity, fixed income and hedge fund investors and includes dynamic hedging and convertible arbitrage. Part IV explains the all important risk management part of the process in detail. This is a highly practical book, all products priced are real world examples and numerical examples are not limited to hypothetical convertibles. It is a must read for anyone wanting to safely get into this highly liquid, high return market.

So plausibel dieser Zusammenhang in der Theorie ist, so komplex und undurchsichtig können die Mechanismen der Preisbildung in der Realität erscheinen, zumal die Markterwartung per se nicht explizit messbar ist. Thilo Helpenstein leistet einen Erklärungsbeitrag zum besseren

Er verwendet regulierte Managementprognosen als innovatives Surrogat der Markterwartung und analysiert die Wirkung von Ergebnisüberraschungen unter Berücksichtigung verhaltensökonomischer Erkenntnisse. Der Autor zeigt auf, wie Kapitalmarktteilnehmer auf Managementprognosen reagieren und welche Implikationen sich hieraus für Manager, Anleger und Regulatoren ableiten lassen.
