Over 2 million students have learned psychology from Dennis Coon. Serving as a guide and mentor to students, Coon uses humor and everyday analogies to make abstract concepts concrete, such as "the cerebral cortex looks like a giant, wrinkled walnut." Using a consistent pedagogical structure, the author helps students learn psychology by using the tested principles of Survey, Question, Read, Recite and Review. In addition, he helps them to master psychology with a fourth "R," Relate, which requires them to relate their new knowledge to their own experience, helping abstract ideas to become concrete. The book uses a "chunking" principle, asking students to read major sections, then review them, before they go on. As the new title of the book indicates, PSYCHOLOGY: A MODULAR APPROACH TO MIND AND BEHAVIOR (formerly called ESSENTIALS OF PSYCHOLOGY) is now modular, and is the medium-sized text in a three-book set authored by Dennis Coon. By separating the chapters into modules, this edition goes even further in "chunking" content for student mastery. This text covers the basic set of topics but differs by having two chapters on development, a separate chapter on "Gender and Sexuality" (Chapter 15), and a concluding chapter on "Applied Psychology" (Chapter 17). The book is frequently described as "fun" because it presents topics that are of interest and relevance to students, relates it to their lives, and provides many engaging applications that students can use in their own lives. For teachers who want a book that students will read, enjoy, and savor - Coon's text is the perfect choice.

. Renewal of Life by Transmission. The most notable distinction between living and inanimate things is that the former maintain themselves by renewal. A stone when struck resists. If its resistance is greater than the force of the blow struck, it remains outwardly unchanged. Otherwise, it is shattered into smaller bits. Never does the stone attempt to react in such a way that it may maintain itself against the blow, much less so as to render the blow a contributing factor to its own continued action. While the living thing may easily be crushed by superior force, it none the less tries to turn the energies which act upon it into means of its own further existence. If it cannot do so, it does not just split into smaller pieces (at least in the higher forms of life), but loses its identity as a living thing. As long as it endures, it struggles to use surrounding energies in its own behalf. It uses light, air, moisture, and the material of soil. To say that it uses them is to say that it turns them into means of its own conservation. As long as it is growing, the energy it expends in thus turning the environment to account is more than compensated for by the return it gets: it grows. Understanding the word "control" in this sense, it may be said that a living being is one that subjugates and controls for its own continued activity the energies that would otherwise use it up. Life is a self-renewing process through action upon the environment.

LOS ANGELES TIMES AND PUBLISHERS WEEKLY BESTSELLER • The powerful memoir of a young doctor and former college athlete diagnosed with a rare disease who spearheaded the search for a cure—and became a champion for a new approach to medical research. “A wonderful and moving chronicle of a doctor’s relentless pursuit, this book serves both patients

and physicians in demystifying the science that lies behind medicine.”—Siddhartha Mukherjee, New York Times bestselling author of *The Emperor of All Maladies* and *The Gene* David Fajgenbaum, a former Georgetown quarterback, was nicknamed the Beast in medical school, where he was also known for his unmatched mental stamina. But things changed dramatically when he began suffering from inexplicable fatigue. In a matter of weeks, his organs were failing and he was read his last rites. Doctors were baffled by his condition, which they had yet to even diagnose. Floating in and out of consciousness, Fajgenbaum prayed for a second chance, the equivalent of a dramatic play to second the game into overtime. Miraculously, Fajgenbaum survived—only to endure repeated near-death relapses from what would eventually be identified as a form of Castleman disease, an extremely deadly and rare condition that acts like a cross between cancer and an autoimmune disorder. When he relapsed while on the only drug in development and realized that the medical community was unlikely to make progress in time to save his life, Fajgenbaum turned his desperate hope for a cure into concrete action: Between hospitalizations he studied his own charts and tested his own blood samples, looking for clues that could unlock a new treatment. With the help of family, friends, and mentors, he also reached out to other Castleman disease patients and physicians, and eventually came up with an ambitious plan to crowdsource the most promising research questions and recruit world-class researchers to tackle them. Instead of waiting for the scientific stars to align, he would attempt to align them himself. More than five years later and now married to his college sweetheart, Fajgenbaum has seen his hard work pay off: A treatment he identified has induced a tentative remission and his novel approach to collaborative scientific inquiry has become a blueprint for advancing rare disease research.
