Diving is an exciting sport as well as a requirement of some vocations such as commercial diving, military diving, public safety diving, and scientific diving. In sport diving, most learn to dive with a half mask to cover their eyes and nose. A second stage regulator supplies their breathing gas (air). This method of diving is safe, simple, and time-tested over the last half century. The diving scenarios that appear throughout this guide are actual situations that occurred to divers. The author spoke with these divers and recorded their experiences for the educational benefit of the

Online Library Aqualung An Service Manual

reader. The scenarios are described as the author interpreted each of the experiences. All the divers and the people that might be associated with their dive experience should not be faulted for any bad situations they came to be in. Every person has had some type of mishap in life, and the purpose for sharing these scenarios is to teach and help avoid future incidents that might cost someone their life.

Over 1900 references to literature published mostly from 1962 through Sept., 1969. Covers journals, reports, monographs, symposia, patents, and a few Russian newspaper items. Most of the 1129 articles were from semi-popular journals. Alphabetical

arrangement by author. Permuted subject index, author index.

NEDU was tasked to conduct a survey of commercially available buoyancy compensators (BCs) and perform testing to determine which BCs perform satisfactorily. Buoyancy compensator evaluation was conducted in three phases. Phase I included receipt inspection of the buoyancy compensator, technical review of the manufacturer-supplied documentation (instructions / repair manual), diver orientation, and Test Pool Evaluation (surface floating attitudes if the BCs were used as life jacket). No failure mode analysis was conducted. Phase II consisted of buoyancy / lift capacity testing in the

Online Library Aqualung An Service Manual

OSF at 190 feet. Phase III consisted of manned dives in the Gulf of Mexico to test diver buoyancy control and operational characteristics.
