Instead of mirroring other websites because they look good, figure out what navigational elements are most important to your business and your audience. Add links that appeal to both interests. You know you want people to convert on your offers and buy your products, but your audience might not be ready to buy. Navigational links should give them other reasons to stay on your website.

Website Navigation: Tips, Examples and Best Practices

Worldwide, there are nautical "road signs" that every boater should know and follow such as buoys, lights, and other aids to navigation that assist mariners in determining a vessel's position and course and that warn of danger. Each year, thousands of dollars of property damage and personal injury occurs because boaters ignore the crucial skill of learning to navigate.

Storytelling helps others "see" through the eyes of another. As you solicit feedback, look for stories of people who are managing the change well. Tell their stories as you give updates about your progress. When your team members can see successful responses to change through stories of others, it will help them navigate the change better. 4.

Collects the author's favorite questions and answers from his tenure as the author of the New York Times' "The Ethicist," presenting evidence that sensible people disagree on the definition of ethical behavior.

* GPS chapter completely updated to reflect newer models and features of GPS receivers now available * Expanded to include a section on routefinding on glaciers, along with additional information on changing declination * Extensive illustrated examples of orientation and wilderness navigation Proceed with confidence when heading off-road or off-trail with the second edition of Wilderness Navigation. Whether you are climbing a glacier, orienteering in the backcountry, or on an easy day hike, Mike and Bob Burns cover all the latest technology and time-tested methods to help you learn to navigate-from how to read a map to compasses and geomagnetism. Bob Burns is a long-time member of The Mountaineers. He has taught classes in the use of map and compass since the late 1970s. Mike Burns is an avid climber. He has instructed climbing and navigation classes, and written articles for Climbing magazine. Part of the The Mountaineers Outdoor Basics series! Created for beginning-to-intermediate enthusiasts, this series includes everything anyone would need to know about staying safe and having fun in the backcountry.

Exploring the surprising connection between time and place, a companion book to the National Air and Space Museum exhibition of the same name traces the history of navigation, showing where we have been, how far we have come and where we are going.

Due to the level of detail, the images are best viewed on a tablet. All the techniques you need to become an expert navigator.

Thoroughly rewritten for today's web environment, this bestselling book offers a fresh look at a fundamental topic of web site development: navigation design. Amid all the changes to the Web in the past decade, and all the hype about Web 2.0 and various "rich" interactive technologies, the basic problems of creating a good web navigation system remain. Designing Web Navigation demonstrates that good navigation is not about technology--it's about the ways people find information, and how you guide them. Ideal for beginning to intermediate web designers, managers, other non-designers, and web development pros looking for another perspective, Designing Web Navigation offers basic design principles, development techniques and practical advice, with real-world examples and essential concepts seamlessly folded in. How does your web site serve your business objectives? How does it meet a user's needs? You'll learn that navigation design touches most other aspects of web site development. This book: Provides the foundations of web navigation and offers a framework for navigation design Paints a broad picture of web navigation and basic human information behavior Demonstrates how navigation reflects brand and affects site credibility Helps you understand the problem you're trying to solve before you set out to design Thoroughly reviews the mechanisms and different types of navigation Explores "information scent" and "information shape" Explains "persuasive" architecture and other design concepts Covers special contexts, such as navigation design for web applications Includes an entire chapter on tagging While Designing Web Navigation focuses on creating navigation systems for large, information-rich sites serving a business purpose, the principles and techniques in the book also apply to small sites. Well researched and cited, this book serves as an excellent reference on the topic, as well as a superb teaching guide. Each chapter ends with suggested reading and a set of questions that offer exercises for experiencing the concepts in action.

At once far flung and intimate, a fascinating look at how finding our way make us human. In this compelling narrative, O'Connor seeks out neuroscientists, anthropologists and master navigators to understand how navigation ultimately gave us our humanity. Biologists have been trying to solve the mystery of how organisms have the ability to migrate and orient with such precision—especially since our own adventurous ancestors spread across the world without maps or instruments. O'Connor goes to the Arctic, the Australian bush and the South Pacific to talk to masters of their environment who seek to preserve their traditions at a time when anyone can use a GPS to navigate. O'Connor explores the neurological basis of spatial orientation within the hippocampus. Without it, people inhabit a dream state, becoming amnesiacs incapable of finding their way, recalling the past, or imagining the future. Studies have shown that the more we exercise our cognitive mapping skills, the greater the grey matter and health of our hippocampus. O'Connor talks to scientists studying how atrophy in the hippocampus is associated with afflictions such as impaired memory, dementia, Alzheimer's Disease, depression and PTSD. Wayfinding is a captivating book that charts how our species' profound capacity for exploration, memory and storytelling results in tophophilia, the love of place. "O'Connor talked to just the right people in just the right places, and her narrative is a marvel of storytelling on its own merits, erudite but lightly worn. There are many reasons why people should make efforts to improve their geographical literacy, and O'Connor hits on many in this excellent book—devouring it makes for a good start." —Kirkus Reviews

A FASCINATING INVESTIGATION OF HOW WE NAVIGATE THE PHYSICAL WORLD, INNER NAVIGATION IS A LIVELY, ENGAGING ACCOUNT OF SUBCONSCIOUS MAPMAKING. Why are we so often disoriented when we come up from the subway? Do we really walk in circles when we lose our bearings in the wilderness? How -- and why -- do we get lost at all? In this surprising, stimulating book, Erik Jonsson, a Swedish-born engineer who has spent a lifetime exploring navigation over every terrain, from the crowded cities of Europe to the emptiness of the desert, gives readers extraordinary new insights into the human way-finding system. Written for the nonscientist, Inner Navigation explains the astonishing array of physical and psychological cues the brain uses to situate us in space and build its "cognitive maps" -- the subconscious maps it employs to organize landmarks. Humans, Jonsson explains, also possess an intuitive direction frame -- an internal compass -- that keeps these maps oriented (when it functions properly) and a dead-reckoning system that constantly updates our location on the map as we move through the world. Even the most cynical city-dweller will be amazed to learn how much of this innate sense we use every day as we travel across town or around the world. Both a scientific and a human story, Inner Navigation contains a rich assortment of real-life insights and examples of the navigational challenges we all face, no matter where or how we live. It's a book that is as provocative to ponder as it is delightful to lose yourself in. Don't worry: Erik Jonsson will help you find your bearings.

An essential guide to tackling what students, families, and educators can do now to cut through stress and performance pressure, and find a path to purpose. Today's college-bound kids are stressed, anxious, and navigating demands in their lives unimaginable to a previous generation. They're performance machines, hitting the benchmarks they're "supposed" to in order to reach the next tier of a relentless ladder. Then, their mental and physical exhaustion carries over right into first jobs. What have traditionally been considered the best years of life have become the beaten-down years of life. Belle Liang and Timothy Klein devote their careers both to counseling individual students and to cutting through the daily pressures to show a better way, a framework, and set of questions to find kids' "true north": what really turns them on in life, and how to harness the core qualities that reveal, allowing them to choose a course of study, a college, and a career. Even the gentlest parents and teachers tend to play into pervasive societal pressure for students to PERFORM. And when we take the foot off the gas, we beg the kids to just figure out what their PASSION is. Neither is a recipe for mental or physical health, or, ironically, for performance or passion. How to Navigate Life shows that successful human beings instead tap into their PURPOSE—the why behind the what and how. Best of all, purpose is a completely translatable quality to every aspect of life, from first jobs to last jobs and everything in between.

Useful, instructive manual shows would-be explorers, hikers, bikers, scouts, sailors, and survivalists how to find their way outdoors by observing animals, weather patterns, shifting sands, and other elements of nature.
