applications.

The third edition of this introductory text covers the factors which influence the release of the drug from the drug product and how the body handles the drug. A stronger focus has been placed on the basics with clear explanations and illustrated examples. There is also more information on statistics and population pharmacokinetics and new chapters on drug distribution, computer applications, enzyme kinetics and pharmacokinetics models.

This BASS book Series publishes selected high-quality papers reflecting recent advances in the design and biostatistical analysis of biopharmaceutical experiments - particularly biopharmaceutical clinical trials. The papers were selected from invited presentations at the Biopharmaceutical Applied Statistics Symposium (BASS), which was founded by the first Editor in 1994 and has since become the premier

statistics. The primary aims of the BASS are: 1) to raise funding to support graduate students in biostatistics programs, and 2) to provide an opportunity for

professionals engaged in pharmaceutical drug research and development to share insights into solving the problems they encounter. The BASS book series is

initially divided into three volumes addressing: 1)

Design of Clinical Trials;

2) Biostatistical Analysis of Clinical Trials; and 3)

Pharmaceutical Applications.

This book is the third of the 3-volume book series.

Questions of Biosimilar  
Studies.

The biopharmaceutical market has come along way since 1982 when the first biopharmaceutical product, recombinant human insulin, was launched. Over 120 such products are currently being marketed around the world including nine blockbuster drugs. The global market for biopharmaceuticals, which is currently valued at US\$41 billion, has been growing at an impressive compound annual growth rate of 21% over the previous five years. With over one third of all pipe-line products in active development are
