Spearhead of the US 8th Air Force's daylight bomber offensive over Germany and northwest Europe in the Second World War, the Boeing B-17 Flying Fortress has become one of the most famous and best-known bomber aircraft of all time. The B-17 is the

latest classic aircraft to receive the Haynes Manual treatment, with French-owned and operated B-17G Pink Lady and the Imperial War Museum's B-17G Mary Alice providing this manual's centerpieces. Boeing B-17 Flying Fortress Manual author Graeme Douglas gives a full insight into owning, servicing and flying the USAAF's formidable Second World War bomber.

When the Boeing 747 first flew commercially in 1970, it ushered in a new era of affordable air travel. Often referred to by the nickname "Jumbo Jet," the 747 was the world's first wide-body commercial airliner, and its advent has proved to be one of the major milestones in aviation history.

The centerpiece of this Haynes Manual is the 747-400, which is the most numerous version. As well as being the bestselling model in the 747 family, there are more 400s currently in service than any other model of this mighty jumbo.

The Boeing 737 is an American short-to medium-range twinjet narrow-body airliner developed and manufactured by Boeing Commercial Airplanes, a division of the Boeing Company. Originally designed as a shorter, lower-cost twin-engine airliner derived from the 707 and 727, the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers, the most recent version of which, the 737 MAX, has become embroiled in a worldwide controversy. Initially envisioned in 1964, the first 737-100

made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa. The 737 series went on to become one of the highest-selling commercial jetliners in history and has been in production in its core form since 1967; the 10,000th example was rolled out on 13 March 2018. There is, however, a very different side to the convoluted story of the 737's development, one that demonstrates a transition of power from a primarily engineering structure to one of accountancy, number-driven powerbase that saw corners cut, and the previous extremely high safety methodology compromised. The result was the 737 MAX. Having entered service in 2017, this model was grounded worldwide in March 2019 following two devastating crashes. In this revealing insight into the Boeing

737, the renowned aviation historian Graham M. Simons examines its design, development and service over the decades since 1967. He also explores the darker side of the 737's history, laying bare the politics, power-struggles, changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing's very survival.

On January 16, 2007, the U.S. Federal Aviation Administration (FAA) issued revised regulatory material relating to the operation of all aircraft on flights with the potential for extended time diversions. As a result, the term ETOPS has been redefined as "Extended Operations" and now includes the operation of all transport aircraft, regardless of the number of engines

(except All- Cargo operations of airplanes with more than 2-engines), further than specific threshold times from available enroute diversion airports. The new FAA rules, while still limiting two-engine airplanes to routes that remain within 60 minutes from an Adequate Airport, unless the operator is approved for ETOPS, will now allow two-engine airplanes to be flown on ETOPS routes with diversion times greater than 240 minutes flying time in certain geographic regions. Passenger airplanes with more than two engines will also be required to meet ETOPS requirements under the new rules, whenever they are operated more than 180 minutes from an Adequate Airport. ETOPS Operational Approvals may be granted to operators if the airframe/engine combination being used has been approved for such

flights and the operator has established acceptable operations and maintenance programs. FAA Advisory Circulars, AC 120-42B and AC 135-42, provide guidelines for the additional operations, maintenance, reliability and training programs that are required of an FAA ETOPS operator. Built by Boeing Commercial Airplanes, the 707 narrow body jet airliner first flew in 1957 and entered revenue service with Pan American World Airways in 1958. Versions of the aircraft have a capacity from 140 to 219 passengers and a range of 2,500 to 5,750 nautical miles. Developed as Boeing's first jet airliner, the 707 is a

swept-wing design with podded engines. Although it was not the first jetliner in service, the 707 was the first to be commercially successful.

Dominating passenger air transport in the 1960s and remaining common through the 1970s, the 707 is generally credited with ushering in the age of jet travel. It established Boeing as one of the largest manufacturers of passenger aircraft and led to the later series of airliners with '7x7' designations. The later 720, 727, 737, and 757 share elements of the 707's fuselage design.

The McDonnell Douglas F-15 Eagle is a twin-engine, highly maneuverable, all-weather tactical jet fighter, designed to gain and maintain air superiority in aerial combat. It is considered among the most

successful of modern jet fighters with 104 aerial combat victories to its credit, with no losses (combined figure across all user-air forces). The F-15 Eagle first flew in July 1972 and entered service with the USAF in 1976. It is expected to remain in service with the USAF until 2025.

On 14 August 2005, a Boeing 737-300 aircraft departed from Larnaca, Cyprus, for Prague. As the aircraft climbed through 16.000 ft, the Captain contacted the company Operations Centre and reported a Take-off Configuration Warning and an Equipment Cooling System problem. Thereafter, there was no response to radio calls to the aircraft. At 07:21 h, the aircraft was intercepted by two F-16 aircraft of the Hellenic Air Force. They observed the aircraft and

reported no external damage. The aircraft continued descending and crashed approximately 33 km northwest of the Athens International Airport. All 121 people on board were killed.
