"Higher education is in the midst of an extraordinary moment of demographic, economic, and cultural transition that has significant implications for how colleges and universities understand their mission, their market, and their management. This book is aimed at creating a practical understanding of key forces changing higher education, but it goes further. It describes those trends, discusses the real life impact of those trends on campuses, and then lays out concrete steps required to address them. Taking a page from George Keller's classic Academic Strategy, management consultant and college administrator Jon McGee uses these economic and demographic trends to inform his strategic approach to managing schools"--

"The economics of American higher education are driven by one key factor--the availability of students willing to pay tuition--and many related factors that determine what schools they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant narrative: while many schools face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly--and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies. These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student support to tenure practices to facilities construction, this book offers data to inform decision-making--decisions that will determine institutional success in meeting demographic challenges"--

The recent trend of trying to measure higher education ' s return on investment misses a fundamental point, argue Charity Johansson and Peter Felten. The central purpose of a college or university is to transform the lives of students—not to merely change them or help them mature. This transformation is an ongoing process of intentionally aligning one ' s behavior with one ' s core sense of personal identity. It is the university ' s central role to lead students in this transformation, a process that shapes students into intentional, critical, and engaged individuals. Recognizing the remarkable influence of the college experience on peoples ' lives, the authors offer a guide to how colleges and universities can effectively lead students through this life-changing process. Drawn from extensive interviews with students and graduates, faculty and staff, Transforming Students gathers diverse stories to show how students experience the transformation process, which rarely follows a neat or linear path. The interviews illustrate central themes from the literature on transformative learning and the undergraduate student experience. A sequel of sorts to George Keller ' s classic Transforming a College—which chronicled Elon University ' s metamorphosis from struggling college to a top regional university—Transforming Students addresses the school ' s core educational mission: to shape students into engaged adults who embrace learning as a lifelong endeavor. Given this effect, the college experience is much more than preparation for a career. It is preparation for life.

“ An intelligent, authentic, and humorous approach in helping your student select the best college academically, personally, and financially. ” —Todd Rinehart, Vice Chancellor for Enrollment, University of Denver Written for parents and families of college-bound students, Jon McGee ' s Dear Parents is an essential tool you ' ll need to navigate the complex and often emotional challenge of getting your daughter or son prepared for—and through—college. Organized chronologically, the book takes readers through the stages of childhood leading up to college, as well as the process of searching for and selecting a college. From the decisions you make during your child ' s early years to the process of setting up their dorm room, this book provides parents with insights, wisdom, and guidance about college, college preparation, and choosing a college. Letters written by college and educational professionals, all with children, frame and illuminate each chapter. Drawing on their personal and professional experience, these experts offer practical and sympathetic advice about preparing for college. The book concludes with insights about sending children off to college and the appropriate roles for parents as your children experience these important years. Undergirded by research but informed by on-the-ground insight, Dear Parents is designed to both engage and inform while demystifying the daunting and ever-changing process of entering college. “ Jon McGee is the equivalent of your higher education Sherpa. He has brilliantly succeeded in making the complex and nerve-racking expedition into college search and selection easier to understand. This book is an indispensable resource for students and families embarking on the journey. ” —Beck A. Taylor, President, Whitworth University

Can ' t find no satisfaction? There ' s no shortage of prescriptions for restlessness out there: Seek adventure. Live your life. Don ' t hold back. Sound familiar? The Road Trip that Changed the World is a book challenging the contemporary conviction that personal freedom and self-fulfillment are the highest good. Like the characters in a Jack Kerouac novel, we ' ve dirtied the dream of white picket fences with exhaust fumes. The new dream is the open road—and freedom. Yet we still desire the solace of faith. We like the concept of the sacred, but unwittingly subscribe to secularized, westernized spirituality. We ' re convinced that there is a deeper plot to this thing called life, yet watered-down, therapeutic forms of religion are all we choose to swallow, and our personal story trumps any larger narrative. This is the non-committal culture of the road. Though driving on freely, we have forgotten where we ' re headed. Jesus said His road is narrow. He wasn ' t some aimless nomad. He had more than just a half tank of gas—He had passion, objectives, and a destination. Do you?

Groomed since the age of eight by his obsessive father Vince Spadea, by most accounts except Andre Agassi'sraquo, who called Vince "a journeyman" at age 25 has been a success. At the start of the 2005 season, 19th seed Spadea was the only over-30-year-old player besides Agassi to be ranked in the top-20 on the world professional tennis circuit. Now in his 13th professional season, Spadea gives a riveting account of the ultra-competitive and often hilarious world of a pro tennis player. He battles injuries, coaching and agent changes, and a slight from American Davis Cup captain Patrick McEnroe as he continues his improbable climb back up the rankings. Along the way, he considers taking two months off to appear on The Bachelor, practices with a still combative John McEnroe in a New York City tennis club, and prowls LA parties with his buddy, comedian Jon Lovitz, trying to pick up actresses like Natalie Portman and jump start his fledgling acting career. Agassi, Andy Roddick, Roger Federer, Rafael Nadal, Martina Navratilova, Maria Sharapova, Jennifer Capriati, Tim Henman, and Marat Safin are all analyzed in more colourful and personal terms than the tennis media has ever provided. In these pages, Spadea breaks the taboo of the "whatever you see, hear and do here, stays here" locker room mentality.

American higher education faces some serious problems—but they are not the ones most people think. In this brief and accessible book, two leading experts show that many so-called crises—from the idea that typical students are drowning in debt to the belief that tuition increases are being driven by administrative bloat—are exaggerated or simply false. At the same time, many real problems—from the high dropout rate to inefficient faculty staffing—have received far too little attention. In response, William G. Bowen and Michael S. McPherson provide a frank assessment of the biggest challenges confronting higher education and propose a bold agenda for reengineering essential elements of the system to meet them. The result promises to help shape the debate about higher education for years to come. Lesson Plan shows that, for all of its accomplishments, higher education today is falling short when it comes to vital national needs. Too many undergraduates are dropping out or taking too long to graduate, minorities and the poor fare worse than their peers, reinforcing inequality, and college is unaffordable for too many. But these problems could be greatly reduced by making significant changes, including targeting federal and state funding more efficiently, allocating less money for "merit aid" and more to match financial need; creating a respected "teaching corps," that would include nontenure faculty; improving basic courses in fields such as math by combining adaptive learning and face-to-face teaching; strengthening leadership; and encouraging more risk taking. It won't be easy for faculty, administrators, trustees, and legislators to make such sweeping changes, but only by doing so will they make it possible for our colleges and universities to meet the nation ' s demands tomorrow and into the future.

An astute diagnosis of one of the biggest problems in business Denial is the unconscious determination that a certain reality is too terrible to contemplate, so therefore it cannot be true. We see it everywhere, from the alcoholic who swears he's just a social drinker to the president who declares "mission accomplished" when it isn't. In the business world, countless companies get stuck in denial while their challenges escalate into crises. Harvard Business School professor Richard S. Tedlow tackles two essential questions: Why do sane, smart leaders often refuse to accept the facts that threaten their companies and careers? And how do we find the courage to resist denial when facing new trends, changing markets, and tough new competitors? Tedlow looks at numerous examples of organizations crippled by denial, including Ford in the era of the Model T and Coca-Cola with its abortive attempt to change its formula. He also explores other companies, such as Intel, Johnson & Johnson, and DuPont, that avoided catastrophe by dealing with harsh realities head-on. Tedlow identifies the leadership skills that are essential to spotting the early signs of denial and taking the actions required to overcome it.
