The creation of new
environments through the use
of developments in
Information Technology is

Download File PDF

significantly altering not only architecture itself but also the roles and tasks of the architects. Architecture can no longer be described in the terms we are familiar with since it no longer corresponds to the form of

architecture as we know it:
an inclusive and exclusive
structure, clearly defined,
with a single interior and a
single exterior. For
architects, the challenge of
the future will increasingly
lie in creatively coming to

environments, understanding

potential of digital spaces
within the physical world,

for better design of service systems by using probabilistic algorithms as well as hybrid and simulation-based approaches. Traditionally, many quantitative tools have been developed to make decisions

in production companies.

This book explores how to use these tools for making decisions inside service industries. Thus, the authors tackle strategic, tactical, and operational problems in service

Making the issue more complex, most service companies' problems are related to the uncertainty of the service demand. This book sheds light on these types of decision problems. It provides studies that

demonstrate the suitability of quantitative methods to make the right decisions.

Consequently, this book presents the business analytics needed to make strategic decisions in service industries.
