Canon EOS 7D Mark II: 10fps The EOS 7D Mark II's continuous shooting mode is noticeably superior to that of the EOS 6D Mark II. It can shoot up to 10fps for an infinite number of JPEGs or 31 Raw images, while the EOS 6D MK II can manage 6.5fps for up to 150 JPEGs or 21 Raw images. So, here, the EOS 7D Mark II is very much the victor.

If you've invested in a camera as sophisticated as the Canon EOS 7D II, you're looking for more than good pictures -- you demand outstanding photos. After all, the 7D II is the most advanced APS-C format camera that Canon has ever introduced. It boasts 20 megapixels of resolution, blazing-fast automatic focus, and cool features like full high-definition movie shooting. But your gateway to pixel proficiency is dragged down by the slim little book included in the box as a manual. You know everything you need to know is in there, somewhere, but you don't know where to start. In addition, the camera manual doesn't offer much information on photography or digital photography. Nor are you interested in spending hours or days studying a comprehensive book on digital SLR still photography that doesn't necessarily apply directly to your 7D II. What you need is a guide that explains the purpose and function of the 7D II's basic controls, how you should use them, and why. Ideally, there should be information about file formats, resolution, exposure, and special autofocus modes available, but you'd prefer to read about those topics only after you've had the chance to go out and take a few hundred great pictures with your new camera. Why isn't there a book that summarizes the most important information in its first two or three chapters, with lots of illustrations showing what your results will look like when you use this setting or that? Now there is such a book. If you want a quick introduction to the 7D II's focus controls, wireless flash synchronization options, how to choose lenses, or which exposure modes are best, this book is for you. If you can't decide on what basic settings to use with your camera because you can't figure out how changing ISO or white balance or focus defaults will affect your pictures, you need this guide.

The Canon EOS 7D Mark II—a major update to the very popular 7D from 2009—is a powerful camera intended for everyone from beginners to advanced amateurs to professionals alike. With boosts in technology that significantly improve autofocus, video, and frame rate (the camera can shoot an astounding 10 frames per second!), the 7D Mark II is poised to be a big hit this fall. This book, in the popular From Snapshots to Great Shots series, is for anyone who upgrades from a point-and-shoot or for anyone who wants to jump into photography with the control and capabilities of a powerful DSLR. There's the manual, of course, as well as competing books, and while they all explain, often in 400+ pages, what the camera can do, none of them shows exactly how to use the camera to create great images! This book has one goal: to teach Canon EOS 7D Mark II owners how to make great shots using their camera. Everything in the book is in service of creating a great image. Starting with the top ten things needed to know about the camera, photographer Jeff Revell then carefully guides readers through the modes of the camera. Users get practical advice from a pro on which settings to use when, great shooting tips, and even end-of-chapter assignments. The Canon EOS 7D Mark II will be available at the end of November 2014. Features include: 20.2 MP sensor; 10 frames per second continuous shooting; wireless flash control; 1080p HD video recording; 65-point autofocus; and more.

The Canon EOS 7D Mark II is an update to the classic 7D model, widely regarded as an excellent APS-C sensor DSLR, aimed at the serious enthusiast. The new model boasts faster burst shooting, improved autofocus and a much broader ISO range, contained in one of its best-built camera bodies. For stills photographers, the Mark II offers an all cross-type, 65-point AF module that works in conjunction with a 150,000-pixel RGB + IR metering sensor, offering the latest version of the 'Intelligent Tracking and Recognition' (iTR) focus system featured in the EOS-ID X. With iTR engaged and an initial focus point selected, focus can be initiated with a half-depress of the shutter-release button, leaving the camera to track the subject as it moves across the frame. The camera's continuous shooting rate is 10 frames per second, previously limited to pro-grade sports cameras. The shutter is rated to more than 200,000 cycles. The main image sensor is a variant of the Dual Pixel AF design first seen in the Canon EOS 70D, offering 20MP output. Using its image sensor, the camera can capture information about subject position and depth whenever its mirror is raised. This potentially gives more decisive autofocus and subject tracking in 'Live View' and while shooting video. The Mark II's movie capabilities have been improved, offering 1080p/60 shooting capability and a choice of MOV or MP4 format, plus three compression options (IPB-Lite, IPB and All-I).
