The laboratory guide directs readers through a series of dissection activities for use in the lab accompanied by new, full color photos and figures. The guide can be used as a stand-alone dissection guide or in conjunction with any Anatomy and Physiology Laboratory Manual.

Ideal for undergraduate comparative anatomy courses, this classic manual combines comprehensive illustrations, text, and a clear, readable design. Organisms include protochordates, lamprey, dogfish shark, mud puppy, and cat.

Known for its clear descriptions and art program, this lab manual examines every structure and function of the human body. It features dissection of the cat, numerous physiological experiments, and an emphasis on the study of anatomy through histology. In addition to a large variety of illustrations, helpful learning support includes lists of appropriate terms accompanying art, numerous photomicrographs and specimen photos, phonetic pronunciations and derivations of terms, diagrams of lab equipment, and lab report questions and report templates. An instructor's guide is available and provides detailed information for instructors about needed materials, suggestions, and answers to questions. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

The Dissection of Vertebrates covers several vertebrates commonly used in providing a transitional sequence in morphology. With illustrations on seven vertebrates [ lamprey, shark, perch, mudpuppy, frog, cat, pigeon ] this is the first book of its kind to include high-quality, digitally rendered illustrations.
