Although we have been successful in our careers, they have not turned out quite as we expected. We both have changed positions several times—for all the right reasons—but there are no pension plans vesting on our behalf. Our retirement funds are growing only through our individual contributions. Michael and I have a wonderful marriage with three great children. As I write this, two are in college and one is just beginning high school. We have spent a fortune making sure our children have received the best education available. One day in 1996, one of my children came home disillusioned with school. He was bored and tired of studying. “Why should I put time into studying subjects I will never use in real life?” he protested. Without thinking, I responded, “Because if you don't get good grades, you won't get into college.” “Regardless of whether I go to college,” he replied, “I'm going to be rich.”

Money in Asia examines two chronic problems that faced early modern monetary economies in East, South, and Southeast Asia: The inability to provide sufficient amounts of small currencies to facilitate local economic transactions and to control currency depreciation.

Two experts in monetary policy offer a unified framework for studying the role of money and liquid assets in the economy. In *Money, Payments, and Liquidity*, Ed Nosal and Guillaume Rocheteau provide a comprehensive investigation into the economics of money and payments by explicitly modeling trading frictions between agents. Adopting the search-theoretic approach pioneered by Nobuhiro Kiyotaki and Randall Wright, Nosal and Rocheteau provide a logically coherent dynamic framework to examine the frictions in the economy that make money and liquid assets play a useful role in trade. They discuss the implications of such frictions for the suitable properties of a medium of exchange, monetary policy, the cost of inflation, the inflation-output trade-off, the coexistence of money, credit, and higher return assets, settlement, and liquidity. After presenting the basic environment used throughout the book, Nosal and Rocheteau examine pure credit and pure monetary economies, and discuss the role of money, different pricing mechanisms, and the properties of money. In subsequent chapters they study monetary policy, the Friedman rule in particular, and the relationship between inflation and output under different information structures; economies where monetary exchange coexists with credit transactions; the coexistence of money and other assets such as another currency, capital, and bonds; and a continuous-time version of the model that describes over-the-counter markets and different dimensions of liquidity (bid-ask spreads, trade volume, trading delays).

The Model Rules of Professional Conduct provides an up-to-date resource for information on legal ethics. Federal, state and local courts in all jurisdictions look to the Rules for guidance in solving lawyer malpractice cases, disciplinary actions, disqualification issues, sanctions questions and much more. The Rules will help you identify proper conduct in a variety of given situations, review those instances where discretionary action is possible, and define the nature of the relationship between you and your clients, colleagues and the courts.
