"This book investigates the use of computer-mediated communication technologies and collaborative processes to facilitate effective interdependent collaboration in writing projects, especially in virtual workplace settings"--Provided by publisher.

David R. Hakes (University of Northern Iowa) has prepared a study guide that will enhance your success. Each chapter of the study guide includes learning objectives, a description of the chapter's context and purpose, a chapter review, key terms and definitions, advanced critical-thinking questions, and helpful hints for understanding difficult concepts. You can develop your understanding of the material by doing the practice problems and answering the short-answer questions. Then you can assess your mastery of the key concepts with the self-test, which includes true/false and multiple-choice questions. Visit <http://www.ichapters.com> for more information on the Study Guide. for both entry and advanced level credentialing exams. It covers every testable subject, providing content review, self-assessment questions, and study hints. This title includes additional digital media when purchased in print format. For this digital book edition, media content is not included. Unique! Exam Hint boxes point out subjects that are frequently tested, helping you study, plan your time, and improve your test-taking skills. Self-study questions are included at the end of each chapter, accompanied by answers and rationales in the back of the book. Complexity level codes (recall, application, and analysis) help you prepare for questions in the way that is most appropriate (e.g., memorization for recall or synthesis for analysis). NBRC content outline coding provides a code for each topic so you can be sure that you have covered every topic that might appear on the exam. CRT and RRT level codes speed your review by identifying the individual topics for the CRT and RRT exams, as well as topics for both. One text now covers both the entry and advanced levels of Respiratory Therapists credentialing exams, so you need only one book to prepare for CRT and RRT credentials. Updated content reflects the NBRC's new examination content outlines, so you get an accurate, current review. New coverage includes subject areas such as CPAP/BiPAP titration during sleep, hemodynamic monitoring, hyperinflation therapy, laryngeal mask airway, high frequency ventilation, oxygen titration, thoracentesis, ultrasound, and ventilator-associated pneumonia protocols.

Requiring no prior knowledge of mathematics or health care, MATH FOR HEALTH CARE PROFESSIONALS, 2e is a comprehensive, foundational resource that is equally effective in the classroom or for self-study. It emphasizes the fundamentals of mathematics as well as their application to health care. Drug dosages, intake and output, weights and measures, temperatures, IV drip rates, and conversions are a focus, while illustrations of syringes, prescriptions, medication labels, IV bags, and I and O charts allow the reader to practice real-life health care skills requiring mathematics. Actual health professionals also share how they use math in their careers. The Second Edition includes all-new chapters devoted to pre-algebra and geometry as well as statistics. It also offers new coverage of body mass index, 24-hour time, calculating the volume of containers of various shapes and sizes, and more. Important Notice: Media content referenced
