Although, as
W.D. Billings

chapter in this

development of

ecology can be
traced back to
the very
beginnings of
the study of
ecology it is
clear that the
modern
development of
this field in
North America is
due in the large
part to the

efforts of

Billings alone.

The foundation

that Billings

laid in the late

1950s came from

his own studies

on deserts and

subsequently

arctic and

alpine plants,

and also from

his enormous

success in

Where To Download

instilling
enthusiasm for
the field in the
numerous
students
attracted to the
plant ecology
program at Duke
University.

Billings' own
studies provided
the model for
subsequent work
in this field.

This blending of field and laboratory approaches promoted the design of experiments which were of direct relevance to understanding the distribution and abundance of plants in nature.

Physiological mechanisms were studied and assessed in the context of the functioning of plants under natural conditions rather than as an end in itself.
