Colossus: Hoover Dam and the Making of the American ...

As breathtaking today as the day it was completed, Hoover Dam not only shaped the American West but helped launch the American century. In the depths of the Great Depression it became a symbol of American resilience and ingenuity in the face of crisis, putting thousands of men to work in a remote desert canyon and bringing unruly nature to heel. Pulitzer Prize-winning writer Michael Hiltzik uses the saga of the dam's conception, design, and construction to tell the broader story of America's efforts to come to grips with titanic social, economic, and natural forces. For embodied in the dam's striking machine-age form is the fundamental transformation the Depression wrought in the nation's very culture—the shift from the concept of rugged individualism rooted in the frontier days of the nineteenth century to the principle of shared enterprise and communal support that would build the America we know today. In the process, the unprecedented effort to corral the raging Colorado River evolved from a regional construction project launched by a Republican president into the New Deal's outstanding—and enduring—symbol of national pride. Yet the story of Hoover Dam has a darker side. Its construction was a gargantuan engineering feat achieved at great human cost; its progress marred by the abuse of a desperate labor force. The water and power it made available spurred the development of such great western metropolises as Los Angeles, Phoenix, Denver, Las Vegas, Salt Lake City, and San Diego, but the vision of unlimited growth held dear by its designers and builders is fast turning into a mirage. In Hiltzik's hands, the players in this epic historical tale spring vividly to life: President Theodore Roosevelt, who conceived the project; William Mulholland, Southern California's great builder of water works, who urged the dam upon a reluctant Congress; Herbert Hoover, who gave the dam his name though he initially opposed its construction; Frank Crowe, the dam's renowned master builder, who pushed his men mercilessly to raise the beautiful concrete rampart in an inhospitable desert gorge. Finally there is Franklin Roosevelt, who presided over the ultimate completion of the project and claimed the credit for it. Hiltzik combines exhaustive research, trenchant observation, and unforgettable storytelling to shed new light on a major turning point of twentieth-century history.

As breathtaking today as when it was completed, Hoover Dam ranks among America's most awe-inspiring, if dubious, achievements. This epic story of the dam—from conception to design to construction—by Pulitzer Prize-winning journalist and Los Angeles Times columnist Michael Hiltzik exposes the tremendous hardships and accomplishments of the men on the ground—and in the air—who built the dam and the demonic drive of Frank Crowe, the boss who pushed them beyond endurance. It is a tale of the tremendous will exerted from start to finish, detailing the canny backroom dealings by Herbert Hoover and Franklin D. Roosevelt, the herculean engineering challenges Crowe faced, and the terrific union strikes by the men who daily fought to beat back the Colorado River. Colossus tells an important part of the story of America's struggle to pull itself out of the Great Depression by harnessing the power of its population and its natural resources.

As breathtaking today as the day it was completed, Hoover Dam not only shaped the American West but helped launch the American century. In the depths of the Great Depression it became a symbol of American resilience and ingenuity in the face of crisis, putting thousands of men to work in a remote desert canyon and bringing unruly nature to heel. "Art historian Barbara Vilander's text places Glaha's efforts within the historical context of western landscape exploration and development and reveals how his particular qualifications led to his selection as the project photographer. Vilander then examines the many publications and venues in which the Bureau used Glaha's photographs to create support for the project. She also discusses how Glaha was recognized in his own era as an influential artist and teacher, and compares his work with that of other contemporary landscape photographers addressing western water management."--BOOK JACKET.

Andrew J. Dunar and Dennis McBride skillfully interweave eyewitness accounts of the building of Hoover Dam. These stories create the richest existing portrait of the building of Hoover Dam and its tremendous effect on the lives of those involved in its creation: the gritty, sometimes grisly realities of living in cardboard boxes and tents during several of the hottest Southern Nevada summers on record; the fearsome carbon monoxide deaths of tunnel builders who, it was claimed, had died of "pneumonia"; the uproarious life of nearby Las Vegas versus the tightly controlled existence of the workers in the built-overnight confines of Boulder City; and of course the astounding accomplishment of building the Dam itself and completing the task not only early but under budget!

New York Times best-selling author and Pulitzer Prize-winning journalist Michael Hiltzik tells the epic story of the New Deal through the outsized personalities of the people who fought for it, opposed it and benefited from it, including FDR, Herbert Hoover, General Hugh Johnson and Harry Hopkins.

It's 1931 and men are desperate for jobs. A lucky few will get to work in the searing heat of the Nevada desert on the massive Hoover Dam, the single largest public works project in history. Their goal is to tame the mighty Colorado River with a dam that will create the largest man-made lake in the world. But can they can overcome their own prejudices to do it?

In the spring of 1931, in a rugged desert canyon on the Arizona-Nevada border, an army of workmen began one of the most difficult and daring building projects ever undertaken—the construction of Hoover Dam. Through the worst years of the Great Depression as many as five thousand laborers toiled twenty-four hours a day, seven days a week, to erect the huge structure that would harness the Colorado River and transform the American West: Construction of the giant dam was a triumph of human ingenuity, yet the full story of this monumental endeavor has never been told. Now, in an engrossing, fast-paced narrative, Joseph E. Stevens recounts the gripping saga of Hoover Dam. Drawing on a wealth of material, including manuscript collections, government documents, contemporary newspaper and magazine accounts, and personal interviews and correspondence with men and women who were involved with the construction, he brings the Hoover Dam adventure to life. Described here in dramatic detail are the deadly hazards the work crews faced as they hacked and blasted the dam's foundation out of solid rock; the bitter political battles and violent labor unrest that threatened to shut the job down; the deprivation and grinding hardship endured by the workers' families; the dam builders' gambling, drinking, and whoring sprees in nearby Las Vegas; and the stirring triumphs and searing moments of terror as the massive concrete wedge rose inexorably from the canyon floor. Here, too, is an unforgettable cast of characters: Henry Kaiser, Warren Bechtel, and Harry Morrison, the ambitious, headstrong construction executives who gambled fortune and fame on the Hoover Dam contract; Frank Crowe, the brilliant, obsessed field engineer who relentlessly drove the work force to finish the dam two and a half years ahead of schedule; Sims Ely, the irascible, teetotaling eccentric who ruled Boulder City, the straightlaced company town created for the dam workers by the federal government; and many more men and women whose courage and sacrifice, greed and frailty, made the dam's construction a great human, as well as technological, adventure. Hoover Dam is a compelling, irresistible account of an extraordinary American epic.

In the depths of the Great Depression, the United States undertook a task so monumental it demanded nearly five thousand people to complete. The Hoover Dam stands as a modern marvel, a testament to America's ingenuity. However, few know the story of the town that built the dam. To house the workers, Secretary of Interior Ray L. Wilbur envisioned a model of city planning, giving birth to Boulder City. Wilbur intended for the city to be temporary, to disappear once the dam was complete, but it didn't work out that way. Local author Paul W. Papa offers a unique look at a town that may have been forged by a dam but took on a life of its own.

The Hoover Dam is one of the largest dams in the world! It provides power and water to people in Arizona, Nevada, Utah, and California. Just how does the Hoover Dam work? And how many people did it take to build this amazing structure? Read this book to find out! Learn all about some remarkable sites in the Famous Places series - part of the Lightning Bolt Books™ collection. With high-energy designs, exciting photos, and fun text, Lightning Bolt Books™ bring nonfiction topics to life!
