Søren Aabye Kierkegaard (/ ˈ s ɔː r ɪ n ˌ k ɪər k ɪ ˈ ɡ ɑː d / SORR-in KEER-ki-gard, also US: / ˈ ɔː ɪər /-igor; Danish: [ˈsø̂ˀn̩ ˌik̂ɪk̂k̂ɪk̂ɪ] ⓘ); 5 May 1813 ⓘ 11 November 1855) was a Danish philosopher, theologian, poet, social critic, and religious author who is widely considered to be the first existentialist philosopher. He wrote critical texts on organized ...

This book deals with a new role - the Relationship Manager - and has been written to fill the gap between technical and business aspects of successful project delivery.

In today's globalized and competitive business environment, companies increasingly look to restructuring, mergers & acquisitions and downsizing to survive, grow and maximize profits. However, when they are not managed in a socially responsible manner, restructurings may exert the negative impact on employees, shareholders, communities, and society as a whole. The book empirically explores the phenomena of corporate social responsibility (CSR), restructuring, and relationships with firms' performance in China. It gives an insight into how Chinese firms respond to expectations of stakeholders by making social goals a part of their overall business operations. It also gives a fresh view of the new concept of socially responsible restructuring. For those seeking to promote socially responsible practices in restructuring, the book provides a unique and stimulating analysis and touchstone.

Provides a unique overview of supply chain management (SCM) concepts, illustrating how the methodology can help enhance construction industry project success This book provides a unique appraisal of supply chain management (SCM) concepts brought together with lessons from industry and analysis gathered from extensive research on how supply chains are managed in the construction industry. The research from leading international academics has been drawn together with the experience from some of the industry's foremost SCM practitioners to provide both the experienced researcher and the industry practitioner a thorough grounding in its principles, as well as an illustration of SCM as a methodology for enhancing construction industry project success. The new edition of Successful Construction Supply Chain Management: Concepts and Case Studies incorporate chapters dealing with Building Information Modelling, sustainability, the 'Demand Chain' in projects, the link between self-organizing networks and supply chains, decision-making, 'Lean' and mega-projects. Other chapters cover risk transfer and allocation, behaviors, innovation, trust, supply chain design, alliances, and knowledge transfer. Supply Chain Management techniques have been used successfully in various industries, such as manufacturing and food processing, for decades Fully updated with new chapters dealing with key construction industry topics such as BIM, sustainability, the 'Demand Chain' in projects, 'Lean' mega-projects, and more Includes contributions from well established academics and practitioners from Network Rail, mainstream construction, and consultancy Illustrates how SCM methodologies can be used to enhance construction industry project success Successful Construction Supply Chain Management: Concepts and Case Studies is an ideal book for postgraduate students at MSc and PhD level studying the topic and for all construction management practitioners.

The scientific and technological upheavals of the 20th Century and the questions and difficulties that went along with them (climate change, nuclear energy, GMO, etc.) have increased the necessity of thinking about and formalizing technoscientific progress and its consequences. Expert evaluations and ethics committees today cannot be the only legitimate sources for understanding the social acceptability and desirability of this progress. Responsibility must be shared out on a wider scale, as much in society as in the process of research and innovation projects. This book presents the main works of Responsible Research and Innovation (RRI) from a moral responsibility point of view, for which it calls upon no fewer than 10 understandings to bring out those which are positive and to support an interpretive and combinatory pluralism. In this sense, it demonstrates moral innovation. It analyzes numerous cases and proposes perspectives that are rarely discussed in this emerging field (current practices of ethical evaluation, concerns of the integrity of research, means for participatory technological evaluation, etc.). It contributes to the pledges of RRI, which largely remains theoretically undetermined even though it reorganizes the relationships between science, innovation and society.

Decades of research have demonstrated that the parent-child dyad and the environment of the family²—which includes all primary caregivers³—are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

This volume summarizes and organizes a growing body of research supporting the role of motivation in adaptive and rewarding interpersonal interactions with others. The field of human motivation is rapidly growing but most studies have focused on the effects of motivation on individuals' personal happiness and task engagement. Only recently have theorists and empiricists begun to recognize that dispositional and state motivations impact the ways individuals approach interpersonal interactions. In addition, researchers are now recognizing that the quality of interpersonal interactions influences consequent happiness and task engagement, thus helping to explain previous findings to this end. Similarly social psychology and relationships researchers have focused on the impact of cognitions, emotions, and behaviors on people's relationships. In their work, relationships researchers demonstrate that both contextual characteristics and individual differences influence the quality of interactions. Many of these studies seek to understand which characteristics strengthen the bonds between people, encourage empathy and trust and create a sense of well-being after a close interaction. This work seeks to integrate the field of human motivation and interpersonal relationships. Both fields have seen extensive growth in the past decade and each can contribute to the other. However, no single compiled work is available that targets both fields. This is the case, in part because only now is there enough work to make a strong and compelling case for their integration. In the previous years, research has been conducted to show that motivation is relevant and important for interactions among strangers and in close relationships. In addition developmental mechanisms for these relations are identified and mechanisms by which motivation strengthens people's relationships. Finally recent work has demonstrated the many implications for interpersonal relationships, showing that motivation impacts a range of interpersonal processes from prejudice regulation and objectification of others to empathy and care. This book seeks to summarize and organize all these findings and present them in a way that is relevant to both motivation researchers and social and relationship researchers.
