Fire safety in buildings, Fire safety, Buildings, Fire risks, Safety measures, Legislation, Fire

This book gathers the proceedings of the 1st Global Civil Engineering Conference, GCEC 2017, held in Kuala Lumpur, Malaysia, on July 25–28, 2017. It highlights how state-of-the-art techniques and tools in various disciplines of Civil Engineering are being applied to solve real-world problems. The book presents interdisciplinary research, experimental and/or theoretical studies yielding new insights that will advance civil engineering methods. The scope of the book spans the following areas: Structural, Water Resources, Geotechnical, Construction, Transportation Engineering and Geospatial Engineering applications.

This book addresses information technologies recently applied in the field of construction safety. Combining case studies, literature reviews and interviews to study the issue, it presents cutting-edge applications of various information technologies (ITs) in construction in different parts of the world, together with a wealth of figures, tables and examples. Though primarily intended for researchers and experts in the field, the book will also benefit graduate students.

This much anticipated new edition provides employers and employees with a day-to-day guide to reducing accidents and injuries, ensuring compliance, avoiding fines and penalties, and controlling workers' compensation costs. You'll not only find comprehensive discussions on all of the construction safety regulations found in the Code of Federal Regulations (CFR) Title 29 Chapter 1926, but you'll also find the actual legal text of the regulations and overviews for each sub Chapter for easier reference. This Construction Safety Handbook covers both the obvious and the hidden dangers of construction and addresses the latest changes in OSHA standards, including new recordkeeping requirements, new ergonomic guidelines, new requirements in the Steel Erection standard, and new additions to signs, signals, and barricades requirements. Written in plain English, this comprehensive handbook provides you with the legal background, practical advice, and ready-to-use written compliance programs you need to ensure your sites meet workplace safety requirements, protect workers, and comply with the standards. Each Chapter provides a description of the requirements of the standard, and a sample written compliance program, checklists, and the appropriate citations from the 29 CFRs. The latest changes in enforcement and inspection policy are also detailed, and a list of OSHA's most frequently cited construction standards is given.

Construction Project Management deals with different facets of construction management emphasizing the basic concepts that any engineering student is supposed to know. The book features computer applications (Primavera and MS Project) used to expla

The Construction Chart Book presents the most complete data available on all facets of the U.S. construction industry: economic, demographic, employment/income, education/training, and safety and health issues. The book presents this information in a series of 50 topics, each with a description of the subject matter and corresponding charts and graphs. The contents of The Construction Chart Book are relevant to owners, contractors, unions, workers, and other organizations affiliated with the construction industry, such as health providers and workers compensation insurance companies, as well as researchers, economists, trainers, safety and health professionals, and industry observers.

This book is about language and the city. Pennycook and Otsuji introduce the notion of 'metrolingualism', showing how language and the city are deeply involved in a perpetual exchange between people, history, migration, architecture, urban landscapes and linguistic resources. Cities and languages are in constant change, as new speakers with new repertoires come into contact as a result of globalization and the increased mobility of people and languages. Metrolingualism sheds light on the ordinariness of linguistic diversity as people go about their daily lives, getting things done, eating and drinking, buying and selling, talking and joking, drawing on whatever linguistic resources are available. Engaging with current debates about multilingualism, and developing a new way of thinking about language, the authors explore language within a number of contemporary urban situations, including cafés, restaurants, shops, streets, construction sites and other places of work, in two diverse cities, Sydney and Tokyo. This is an invaluable look at how people of different backgrounds get by linguistically. Metrolingualism: Language in the city will be of special interest to advanced undergraduate/postgraduate students and researchers of sociolinguistics and applied linguistics.
