The SAGE Guide to Writing in Criminal Justice Research Methods equips students with transferable writing skills that can be applied across the field of criminal justice—both academically and professionally. Focused on teaching students how to write in the academic setting while introducing them to a number of other writing tools specific to research methods, such as writing literature reviews, abstracts, proposals, and more. This report describes some of the National Institute of Justice's (NIJ) successful research projects, summarizes their findings, and discusses their influence on criminal justice policy and practice. The study considers whether the research has (1) addressed issues and problems that are central and critical to criminal justice policy and practice, (2)

affected law enforcement and other functions of the system, and (3) ultimately helped improve the system's effectiveness in dealing with crime and criminals. The author asked NIJ staff to nominate research efforts that, in their opinion, had influenced policy and practice in the last two decades and then interviewed high-level managers and policymakers about their knowledge and use of the research. Finally, she reviewed the relevant criminal justice literature to see whether the changes in the field reflected or paralleled directions suggested by the research. The study indicates that research has indeed helped shape the way criminal justice policymakers and practitioners think about issues, how they identify problems that need attention, which alternatives they consider for dealing with their problems, and their sense of what can be accomplished.

Most major crime in this country emanates from two major data sources. The FBI's Uniform Crime Reports has collected information on crimes known to the police and arrests from local and state jurisdictions throughout the country. The National Crime Victimization Survey, a general population survey designed to cover the extent, nature, and consequences of criminal victimization, has been conducted annually since the early 1970s. This workshop was designed to consider similarities and differences in the methodological problems encountered by the survey and criminal justice research communities and what might be the best focus for the research community. In addition to comparing and contrasting the methodological issues

associated with self-report surveys and official records, the workshop explored methods for obtaining accurate self-reports on sensitive questions about crime events, estimating crime and victimization in rural counties and townships and developing unbiased prevalence and incidence rates for rate events among population subgroups.

Public opinion is vital to the functioning of the criminal justice system but it is not at all clear how best to establish what this is, and what views people have on different aspects of criminal justice and the criminal justice system. Politicians and the media often assume that the public wants harsher, tougher and longer sentences, and policies may be shaped accordingly. Detailed research and more specific polling often tells a different story. This book is concerned to shed further light on the nature of public views on criminal justice, paying particular attention to public opinion towards specific types of offenders, such as sex offenders and mentally disordered offenders. In doing so it challenges many enduring assumptions regarding people's views on justice, and confronts the myths that infect our understanding of what people think about the criminal justice system.

and recurring case studies that demonstrate how concepts relate to students' lives. Authors Callie M. Rennison and Timothy C. Hart introduce practical research strategies used in criminal justice to show students how a research question can become a policy that changes or influences criminal justice practices. The book's student-driven approach addresses both the why and the how as it covers the research process and focuses on the practical application of data collection and analysis. By demonstrating the variety of ways research can be used and reinforcing the need to discern quality research, the book prepares students to become critical consumers and ethical producers of research.

How to think about, conduct, and evaluate research is

fundamental to the study and understanding of criminology and criminal justice. Students take methods, statistics, theory, and topic-specific classes, but they struggle to integrate what they learn and to see how it fits within the broader field of criminology and criminal justice research. This book directly tackles this problem by helping students to develop a 'researcher sensibility', and demonstrates how the 'nuts and bolts' of criminal justice research - including research design, theory, data, and analysis - are and can be combined. Relying on numerous real-world examples and illustrations, this book reveals how anyone can 'think like a researcher'. It reveals, too, why that ability is critical for being a savvy producer or consumer of criminological and criminal justice research.
