Voting criteria included 'strongly recommended' (essential ... However, seeking additional feedback and critique of this checklist from general practitioners, rheumatologists, sports physicians and ...

This book constitutes the refereed proceedings of the 11th International Conference on User Modeling, UM 2007, held in Corfu, Greece in July 2007. Coverage includes evaluating user/student modeling techniques, data mining and machine learning for user modeling, user adaptation and usability, modeling affect and meta-cognition, as well as intelligent information retrieval, information filtering and content personalization.

Essays written by social work master's degree students responding to the categories of psychological diagnosis issued by the American Psychiatric Association.

In the third Critique Kant details an aesthetic operation of judgment that is surprising considering how judgment functioned in the first Critique. In this book, I defend an understanding of Kant's theory of Geschmacksurteil as detailing an operation of the faculties that does not violate the cognitive structure laid out in the first Critique. My orientation is primarily epistemological, elaborating the determinations that govern the activity of pure aesthetic judging that specify it as a "bestimmte" type of judgment without transforming it into "ein bestimmendes Urteil". I focus on identifying how the logical functions from the table of judgments operate in the pure aesthetic judgment of taste to reveal "the moments to which this power of judgment attends in its reflection" (CPJ, 5:203). In the course of doing so, a picture emerges of how the world is not just cognizable in a Kantian framework but also charged with human feeling, acquiring the inexhaustible, inchoate meaningfulness that incites "much thinking" (CPJ, 5:315). The universal communicability of aesthetic pleasure serves as the foundation that grounds robust intersubjective relations, enabling genuine connection to others through a shared a priori feeling.

Does philosophical critique have a future? What are its possibilities, limits and presuppositions? This collection by outstanding scholars from various traditions, responds to these questions by examining the forms of philosophical critique that have shaped continental thought from Spinoza and Kant to Marx, Foucault, Derrida and Rancière.

This second edition of Quay Books' bestselling title retains all of the successful features of the first, plus additional material including a chapter on European psychiatric research. Foreword by Kevin Gournay.

Nicotine is almost universally believed to be the major factor that motivates smoking and impedes cessation. Authorities such as the Surgeon General of the USA and the Royal College of Physicians in the UK have declared that nicotine is as addictive as heroin and cocaine. This book is a critique of the nicotine addiction hypothesis, based on a critical review of the research literature that purports to prove that nicotine is as addictive drug. The review is based on a re-examination of more than 700 articles and books on this subject, including animal and human experimental studies, effects of 'nicotine replacement therapies', and many other relevant sources. This review concludes that on present evidence, there is every reason to reject the generally accepted theory that nicotine has a major role in cigarette smoking. A critical examination of the criteria for drug addiction demonstrates that none of these criteria is met by nicotine, and that it is much more likely that nicotine in fact limits rather than facilitates smoking.

The political and social structures of modernity are dominated by really eurocentric forms and relations, yet the theorisation of the eurocentricity of modernity remains barely developed. At the same time, modern political and social theory is fundamentally eurocentric, yet the critique of eurocentrism remains marginal to marxian and critical realist theory. Addressing the eurocentrism of both modernity and modern theory, Eurocentrism: A Marxian Critical Realist Critique discloses the deeply embedded constraints it imposes on historical and social reflexivity. Building on the insights of post-structuralism and post-colonialism, Eurocentrism shows how the powerful anti-eurocentric tendencies of the marxian critique of civil society and the critical realist critique of philosophy have been misunderstood or ignored. It develops the latent potential of these traditions to develop a systematically anti-eurocentric approach to understanding and explaining modernity.

Computer technology has impacted the practice of medicine in dramatic ways. Imaging techniques provide noninvasive tools which alter the diagnostic process. Sophisticated monitoring equipment presents new levels of detail for both patient management and research. In most of these technology applications, the computer is embedded in the device; its presence is transparent to the user. There is also a growing number of applications in which the health care provider directly interacts with a computer. In many cases, these applications are limited to administrative functions, e.g., office practice management, location of hospital patients, appointments, and scheduling. Nevertheless, there also are instances of patient care functions such as results reporting, decision support, surveillance, and reminders. This series, Computers and Medicine, will focus upon the direct use of information systems as it relates to the medical community. After twenty-five years of experimentation and experience, there are many tested applications which can be implemented economically using the current generation of computers. Moreover, the falling cost of computers suggests that there will be even more extensive use in the near future. Yet there is a gap between current practice and the state-of-the-art.

Traces a conceptual history of critique in German philosophy from the eighteenth century to the present. Critique has been a central theme in the German philosophical tradition since the eighteenth century. The main goal of this book is to provide a history of this concept from its Kantian inception to contemporary critical theory. Focusing on both canonical and previously overlooked texts and thinkers, the contributors bring to light alternative conceptions of critique within nineteenth- and twentieth-century German philosophy, which have profound implications for contemporary philosophy. By offering a critical revision of the history of modern European philosophy, this book raises new questions about what it means for philosophy to be "critical" today. María del Rosario Acosta López is Professor of Hispanic Studies at the University of California, Riverside. She has published several books, including Aesthetic Reason and Imaginative Freedom: Friedrich Schiller and Philosophy (coedited with Jeffrey L. Powell), also published by SUNY Press. J. Colin McQuillan is Associate Professor of Philosophy at St. Mary's University. His previously published books include Immanuel Kant: The Very Idea of a Critique of Pure Reason.

An interactive, multimedia text that introduces students to reading and writing at the college level.
