His son was never born. And Jason is not an ordinary college physics professor, but a celebrated genius who has achieved something remarkable. Something impossible. Is it this world or the other that's the dream? And even if the home he remembers is real, how can Jason possibly make it back to the family he loves? The answers lie in a journey more wondrous and horrifying than anything he could've imagined—one that will force him to confront the darkest parts of himself even as he battles a terrifying, seemingly unbeatable foe. Is it in our nature to be altruistic, or evil, to make art, use tools, or create language? Is it in our nature to think in any particular way? For Daniel L. Everett, the answer is a resounding no: it isn't in our nature to do any of these things because human nature does not exist—at least not as we usually think of it. Flying in the face of major trends in Evolutionary Psychology and related fields, he offers a provocative and compelling argument in this book that the only thing humans are hardwired for is freedom: freedom from evolutionary instinct and freedom to adapt to a variety of environmental and cultural contexts. Everett sketches a blank-slate picture of human cognition that focuses not on what is in the mind but, rather, what the mind is in—namely, culture. He draws on years of field research among the Amazonian people of the Pirahã in order to carefully scrutinize various theories of cognitive instinct, including Noam Chomsky's foundational concept of universal grammar, Freud's notions of unconscious forces, Adolf Bastian's psychic unity of mankind, and works on massive modularity by evolutionary psychologists such as Leda Cosmides, John Tooby, Jerry Fodor, and Steven Pinker. Illuminating unique characteristics of the Pirahã language, he demonstrates just how differently various cultures can make us think and how vital culture is to our cognitive flexibility. Outlining the ways culture and individual psychology operate symbiotically, he posits a Buddhist-like conception of the cultural self as a set of experiences united by various apperceptions, episodic memories, ranked values, knowledge structures, and social roles—and not, in any shape or form,

biological instinct. The result is a fascinating portrait of the “dark matter of the mind,” one that shows that our greatest evolutionary adaptation is adaptability itself.

In this brilliant exploration of our cosmic environment, the renowned particle physicist and New York Times bestselling author of *Warped Passages* and *Knocking on Heaven's Door* uses her research into dark matter to illuminate the startling connections between the furthest reaches of space and life here on Earth. Sixty-six million years ago, an object the size of a city descended from space to crash into Earth, creating a devastating cataclysm that killed off the dinosaurs, along with three-quarters of the other species on the planet. What was its origin? In *Dark Matter and the Dinosaurs*, Lisa Randall proposes it was a comet that was dislodged from its orbit as the Solar System passed through a disk of dark matter embedded in the Milky Way. In a sense, it might have been dark matter that killed the dinosaurs. Working through the background and consequences of this proposal, Randall shares with us the latest findings—established and speculative—regarding the nature and role of dark matter and the origin of the Universe, our galaxy, our Solar System, and life, along with the process by which scientists explore new concepts. In *Dark Matter and the Dinosaurs*, Randall tells a breathtaking story that weaves together the cosmos' history and our own, illuminating the deep relationships that are critical to our world and the astonishing beauty inherent in the most familiar things.

*Dark Matter* is the first and only series to bring together the works of black SF and fantasy writers. The first volume was featured in the "New York Times," which named it a Notable Book of the Year.

Their top reporter has written an exposé claiming that he had liaisons with an escort, a young woman prepared to tell the world her salacious tale. But the chief justice is not without allies and his greatest supporter is determined to stop the story in its tracks. Nick Heller is a private spy—an intelligence operative based in Boston, hired by lawyers, politicians, and even foreign governments. A high-powered investigator with a penchant for doing things his own way, he's called to Washington, DC, to help out in this delicate, potentially explosive situation. Nick has just forty-eight hours to disprove the story about the chief justice. But when the call girl is found murdered, the case takes a dangerous turn, and Nick resolves to find the mastermind behind the conspiracy before anyone else falls victim to the maelstrom of political scandal and ruined reputations predicated upon one long-buried secret.

When Alice Blair is accepted to the world-renowned St. Robert's high school, she figures it must be a mistake since there's nothing special about her. But on her fifteenth birthday, the headmaster gives her a necklace, and she begins to dream of weird worlds. Alice learns that as she sleeps, her consciousness actually explores the dark matter universe of Thronos, the universal spirit. As he reveals the science of dark matter, the human soul, and other mysteries, he gives her a monumental task: bring beauty to your world. During her visits, Alice meets Reina, an alien child from an underwater planet who has been given the same task. Together they learn that beauty can be many things, like a mother's love for a child, compassion for others, art- almost anything that gives you that good feeling in your soul. While they struggle to accomplish Thronos' difficult task, Alice's mission and her life are thrown into jeopardy when her connection to the dark universe is discovered. But what she doesn't know is that she is playing a key role in St. Robert's prophecy. If she fails, humanity will perish in flames and ashes. The fast-paced contemporary story combines science speculation with a cosmic god, the purpose of life, human nature, consciousness, and friendships. Indeed, with one possible scientific discovery in dark matter, there would be proof of God and a divine purpose and design to our world.
