An electrifying account of the extraordinary untold history behind Darwin's theory of evolution

Evolution was not discovered single-handedly, Rebecca Stott argues, contrary to what has become standard lore, but is an idea that emerged over many centuries, advanced by daring individuals across the globe who had the imagination to speculate on nature's extraordinary ways, and who had the courage to articulate such speculations at a time when to do so was often considered heresy.

From the author of *Death and the Maiden* and other works that explore relations of power in the postcolonial world comes the story of a man whose distant past comes to haunt him. Is the sordid story behind human zoos that flourished in Europe in the nineteenth century connected somehow to a boy's life a hundred years later? On Fitzroy Foster's fourteenth birthday on September 11, 1981, he receives an unexpected and unwelcome gift: when his father snaps his picture with a Polaroid, another person's image appears in the photo. Fitzroy and his childhood sweetheart, Cam, set out on a decade-long journey in search of this stranger's identity—and to reinstate his own—across seas and continents, into the far past and the evil and good that glint in the eyes of the elusive visitor. Seamlessly weaving together fact and fiction, *Darwin's Ghosts* holds up a different light to Conrad's "The horror! The horror!" and a different kind of answer to the urgent questions, Who are we? And what can we do about it?

The author reveals why Darwin waited two decades to release his controversial theories of natural selection and evolution, in a fascinating portrait of the turbulent world of Victorian biology. Reprint. 10,000 first printing.

A Cambridge historian, Elizabeth Vogelsang, is found drowned, clutching a glass prism in her hand. The book she was writing about Isaac Newton's involvement with alchemy—the culmination of her lifelong obsession with the seventeenth century—remains unfinished. When her son, Cameron, asks his former lover, Lydia Brooke, to ghostwrite the missing final chapters of his mother's book, Lydia agrees and moves into Elizabeth's house—a studio in an orchard where the light moves restlessly across the walls. Soon Lydia discovers that the shadow of violence that has fallen across present-day Cambridge, which escalates to a series of murders, may have its origins in the troubling evidence that Elizabeth's research has unearthed. As Lydia becomes ensnared in a dangerous conspiracy that reawakens ghosts of the past, the seventeenth century slowly seeps into the twenty-first, with the city of Cambridge the bridge between them. Filled with evocative descriptions of Cambridge, past and present, *Ghostwalk* centers around a real historical mystery that Rebecca Stott has uncovered involving Newton's alchemy. In it, time and relationships are entangled—the present with the seventeenth century, and figures from the past with the love-torn twenty-first-century woman who is trying to discover their secrets. A stunningly original display of scholarship and imagination, and a gripping story of desire and obsession, *Ghostwalk* is a rare debut that will change the way most of us think about scientific innovation, the force of history, and time itself.

A compelling portrait of a unique moment in American history when the ideas of Charles Darwin reshaped American notions about nature, religion, science and race "A lively and informative history." – *The New York Times Book Review* Throughout its history America has been torn in two by debates

over ideals and beliefs. Randall Fuller takes us back to one of those turning points, in 1860, with the story of the influence of Charles Darwin's just-published *On the Origin of Species* on five American intellectuals, including Bronson Alcott, Henry David Thoreau, the child welfare reformer Charles Loring Brace, and the abolitionist Franklin Sanborn. Each of these figures seized on the book's assertion of a common ancestry for all creatures as a powerful argument against slavery, one that helped provide scientific credibility to the cause of abolition. Darwin's depiction of constant struggle and endless competition described America on the brink of civil war. But some had difficulty aligning the new theory to their religious convictions and their faith in a higher power. Thoreau, perhaps the most profoundly affected all, absorbed Darwin's views into his mysterious final work on species migration and the interconnectedness of all living things. Creating a rich tableau of nineteenth-century American intellectual culture, as well as providing a fascinating biography of perhaps the single most important idea of that time, *The Book That Changed America* is also an account of issues and concerns still with us today, including racism and the enduring conflict between science and religion.

The modern materialist approach to life has conspicuously failed to explain such central mind-related features of our world as consciousness, intentionality, meaning, and value. This failure to account for something so integral to nature as mind, argues philosopher Thomas Nagel, is a major problem, threatening to unravel the entire naturalistic world picture, extending to biology, evolutionary theory, and cosmology. Since minds are features of biological systems that have developed through evolution, the standard materialist version of evolutionary biology is fundamentally incomplete. And the cosmological history that led to the origin of life and the coming into existence of the conditions for evolution cannot be a merely materialist history, either. An adequate conception of nature would have to explain the appearance in the universe of materially irreducible conscious minds, as such. Nagel's skepticism is not based on religious belief or on a belief in any definite alternative. In *Mind and Cosmos*, he does suggest that if the materialist account is wrong, then principles of a different kind may also be at work in the history of nature, principles of the growth of order that are in their logical form teleological rather than mechanistic. In spite of the great achievements of the physical sciences, reductive materialism is a world view ripe for displacement. Nagel shows that to recognize its limits is the first step in looking for alternatives, or at least in being open to their possibility.

From one of the world's leading natural scientists and the acclaimed author of *Trilobite!*, *Life: A Natural History of Four Billion Years of Life on Earth and Dry Storage No. 1* comes a fascinating chronicle of life's history told not through the fossil record but through the stories of organisms that have survived, almost unchanged, throughout time. Evolution, it seems, has not completely obliterated its tracks as more advanced organisms have evolved; the history of life on earth is far older—and odder—than many of us realize. Scattered across the globe, these remarkable plants and animals continue to mark seminal events in geological time. From a moonlit beach in Delaware, where the hardy horseshoe crab shuffles its way to a frenzy of mass mating just as it did 450 million years ago, to the dense rainforests of New Zealand, where the elusive, unprepossessing velvet worm has burrowed deep into rotting timber since before the breakup of the ancient supercontinent, to a stretch of Australian coastline with stromatolite formations that bear witness to the Precambrian dawn, the existence of these survivors offers us a tantalizing glimpse of pivotal points in evolutionary history. These are not “living fossils” but rather a handful of tenacious creatures of days long gone. Written in buoyant, sparkling prose, *Horseshoe Crabs and Velvet Worms* is a marvelously captivating exploration of the world's old-timers combining the very best of science writing with an explorer's sense of adventure and wonder.

A father-daughter story that tells of the author's experience growing up in a separatist fundamentalist Christian cult, from the author of the national bestseller *Ghostwalk* Rebecca Stott grew up in in Brighton, England, as a fourth-generation member of the Exclusive Brethren, a cult that believed the world is ruled by Satan. In this closed community, books that didn't conform to the sect's rules were

# Access Free Darwins Ghosts The Secret History Of Evolution

## Rebecca Stott

banned, women were subservient to men and were made to dress modestly and cover their heads, and those who disobeyed the rules were punished and shamed. Yet Rebecca's father, Roger Stott, a high-ranking Brethren minister, was a man of contradictions: he preached that the Brethren should shun the outside world, yet he kept a radio in the trunk of his car and hid copies of Yeats and Shakespeare behind the Brethren ministries. Years later, when the Stotts broke with the Brethren after a scandal involving the cult's leader, Roger became an actor, filmmaker, and compulsive gambler who left the family penniless and ended up in jail. A curious child, Rebecca spent her insular childhood asking questions about the world and trying to glean the answers from forbidden library books. Only when she was an adult and her father was dying of cancer did she begin to understand all that had occurred during those harrowing years. It was then that Roger Stott handed her the memoir he had begun writing about the period leading up to what he referred to as the traumatic "Nazi decade," the years in the 1960s in which he and other Brethren leaders enforced coercive codes of behavior that led to the breaking apart of families, the shunning of members, even suicides. Now he was trying to examine that time, and his complicity in it, and he asked Rebecca to write about it, to expose all that was kept hidden. In the Days of Rain is Rebecca Stott's attempt to make sense of her childhood in the Exclusive Brethren, to understand her father's role in the cult and in the breaking apart of her family, and to come to be at peace with her relationship with a larger-than-life figure whose faults were matched by a passion for life, a thirst for knowledge, and a love of literature and beauty. A father-daughter story as well as a memoir of growing up in a closed-off community and then finding a way out of it, this is an inspiring and beautiful account of the bonds of family and the power of self-invention. Praise for In the Days of Rain "A marvelous, strange, terrifying book, somehow finding words both for the intensity of a childhood locked in a tyrannical secret world, and for the lifelong aftershocks of being liberated from it."—Francis Spufford, author of Golden Hill "Writers are forged in strange fires, but none stranger than Rebecca Stott's. By rights, her memoir of her father and her early childhood inside a closed fundamentalist sect obsessed by the Rapture ought to be a horror story. But while the historian in her is merciless in exposing the cruelties and corruption involved, Rebecca the child also lights up the book, existing in a world of vivid play, dreams, even nightmares, so passionate and imaginative that it helps explain how she survived, and—even more miraculous—found the compassion and understanding to do justice to the story of her father and the painful family life he created."—Sarah Dunant, author of The Birth of Venus

Traces the life of the nineteenth-century scientist who discovered how glaciers form, describing how he enlisted the American public to collect natural specimens for his museum, his work training a generation of scientists, and his staunchly racist views.
