Maternal Newborn Nursing Care Plans, Third Edition teaches students and practicing nurses how to assess, plan, provide, and evaluate care for pregnancy, delivery, recovery, abnormal conditions, and newborn care. Featuring more than 65 of the most common and high-risk care plans for nursing care using the nursing process approach, it includes NIC interventions, discussions on collaborative problems, key nursing activities, signs and symptoms, and diagnostic studies. Using a progressive approach, the text begins with generic care plans that address all patient situations regardless of the patient diagnosis or condition before moving on to more complicated and specific care plans.

This paediatric nursing text discusses the disorders most commonly encountered in both hospital and community care settings. It discusses anatomy, physiology, paediatric differences and common diagnostic tests and medications, enabling readers to associate systems and diseases with appropriate tests and medications. It provides nursing care plans for key disorders, a unit on growth and development, a summary of growth and development, and special considerations for caring for children.
