A desert is a barren area of landscape where little precipitation occurs and, consequently, living conditions are hostile for plant and animal life. The lack of vegetation exposes the unprotected surface of the ground to the processes of denudation. About one-third of the land surface of the world is arid or semi-

Over the last twenty years there has been a major expansion of knowledge in the field of landforms and landforming processes of

deserts. This advanced-level book provides a benchmark for the current state of science, and is written by an international team of authors who are acknowledged experts in their fields.

Many people have heard of Earth's largest deserts: the Sahara in northern Africa, the

Gobi in east central Asia, and the Arabian in the Arabian Peninsula. However, some people may not know that these deserts weren't always so big. Desertification is the process by which natural or human causes turn previously productive land into desert areas. This book explores the different causes of desertification and the

ways even longtime desert lands can change. Fact boxes and sidebars provide readers with additional information relating to the main text.

About one-third of the Earth's land surface experiences a desert climate, and this area supports approximately 15% of

# Download Free Deserts And Desert Environments

the planet's population. This percentage continues to grow, and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is

comprehensive in its coverage of the geomorphology of desert environments, and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins, and aeolian surfaces, and concludes with a discussion of the role of

climatic change. Written by a team of international authors, all of whom are active in the field, the chapters cover the spectrum of desert geomorphology.

Plant nutrients are found in a relatively thin layer of soil materials that covers all of the continents of the entire world. These

plant nutrients provide the necessary food, clothing, and shelter for human existence. As the population of the world increases, the plant nutrients in desert environments become more and more important for the survival of mankind. Plant Nutrients in Desert Environments is a general information book for both professionals

and laymen. The common plant nutrients present in deserts are identified, and detailed instructions are given on how to effectively utilize them in commercial agriculture, home gardening, home landscaping, for disturbed land reclamation and for recreational purposes.
