Design optimization applies the methods of mathematical optimization to design problem formulations and it is sometimes used interchangeably with the term engineering optimization. When the objective function f is a vector rather than a scalar , the problem becomes a multi-objective optimization one.

Design optimization - Wikipedia

Weight optimization is a technique used mostly in the automobile industry to get the optimum weight or less weight of the desired part or product. Here parametric optimization also comes in handy to get the right design parameters to build the final product that is the concept design. The main objective of weight optimization is to build a concept design with less weight as compared to other designs.
