Ancient calendars found around the world are designed to end one point in time. They communicate an urgent warning to everyone alive today! Complex bronze and gold clocks with multiple dials are found in museums around the world. Why they have such advanced intricacy has stumped scientists for hundreds of years.This book reveals why the ancients built so many pyramids, observatories as well as those complex gold and bronze clocks with more than one dial. It surprised me greatly to discover that their various complex designs in one way or another converge on 21 December 2012. It amazes me that ancient cultures separated by thousands of miles of geography and thousands of years in chronology agree so precisely in the cyclical nature of time, history and prophecy, which is history written in advance. The most famous example is the Mayan-Aztec calendar, which ends its 25,626-year cycle on that momentous date. Some researchers have also found 21 December 2012 in what is called, the Bible Code. Using very different research methods, I discovered it in the Bible's book of Revelation and Daniel's prophecies. It is one of the most important dates in the plan of God for all humanity!

More than 3 million people in the United States suffer from epilepsy. The only text to provide the doctor's and patient's views, 100 Questions & Answers About Epilepsy addresses this disease in adults, focusing on strategies for combating seizures and their effects, dealing with family and co-workers, and other issues of critical importance to individuals suffering from epilepsy. 100 Questions & Answers About Epilepsy gives you authoritative, practical answers to your questions about treatment options, sources of support, and much more. Written by an expert on the subject, this book is an invaluable resource for anyone coping with the physical and emotional turmoil of epilepsy.

This book constitutes the thoroughly refereed post-workshop proceedings of the First WICI International Workshop on Web Intelligence meets Brain Informatics, WImBI 2006, which was held in Beijing, China, in December 2006. The workshop explores a new perspective of Web Intelligence (WI) research from the viewpoint of Brain Informatics (BI). The 26 revised full-length papers presented together with three introductory lectures have been carefully reviewed and selected.

About 2-2.3 million people in the US suffer from epilepsy; one-third of them are children. Whether you have a child who has been diagnosed with epilepsy or know someone who's child suffers from seizures, this book offers help. 100 Questions and amp; Answers About Your Child's Epilepsy provides authoritative, practical answers to the most common questions posed by parents and the adolescents themselves. the only text to provide the doctor's and patient's point of view, 100 Questions and amp; Answers About Your Child's Epilepsy discusses the different types of seizures, diagnostic tests, treatments, and much

More than any other textbook, Don and Sandra Hockenbury's Psychology relates the science of psychology to the lives of the wide range of students taking the introductory course. Now Psychology returns in a remarkable new edition that shows just how well-attuned the Hockenburys are to the needs of today's students and instructors.

This book examines how to develop the main traits that are necessary to become an " informed intuitant ". Case studies and examples of successful " informed intuitants " are a major component of the book. " Intuitant " is someone who has the intuitive awareness to be successful. " Informed intuitant " indicates that the individual/decision maker not only applies his/her intuition but also verifies it through using data-driven approaches (such as data analytics). Some of this work resulted from research examining how well do executives trust their intuition.

The second edition of the Handbook of Motivation at School presents an integrated compilation of theory and research in the field. With chapters by leading experts, this book covers the major theoretical perspectives in the field as well as their application to instruction, learning, and social adjustment at school. Section I focuses on theoretical perspectives and major constructs, Section II on contextual and social influences on motivation, and Section III on new directions in the field. This new edition will have the same popular organizational structure with theories at the beginning. It will also include new chapters that cover motivation as it relates to identity, culture, test anxiety, mindfulness, neuroscience, parenting, metacognition, and regulatory focus.

Every arena of science has its own flash-point issues—chemistry and poison gas, physics and the atom bomb—and genetics has had a troubled history with race. As Jonathan Marks reveals, this dangerous relationship rumbles on to this day, still leaving plenty of leeway for a belief in the basic natural inequality of races. The eugenic science of the early twentieth century and the commodified genomic science of today are unified by the mistaken belief that human races are naturalistic categories. Yet their boundaries are founded neither in biology nor in genetics and, not being a formal scientific concept, race is largely not accessible to the scientist. As Marks argues, race can only be grasped through the humanities: historically, experientially, politically. This wise, witty essay explores the persistence and legacy of scientific racism, which misappropriates the authority of science and undermines it by converting it into a social weapon.

This second edition presents the enormous progress made in recent years in the many subfields related to the two great questions : how does the brain work? and, How can we build intelligent machines? This second edition greatly increases the coverage of models of fundamental neurobiology, cognitive neuroscience, and neural network approaches to language. (Midwest).

Jonathan Bluestein's Research of Martial Arts is a book about the true essence of martial arts. It includes neither instruction on deadly killing techniques, nor mystical tales of so called super-human masters. Rather, it is a vast compilation of seriously thought-out observations made on the subject by the author, as well as many other martial artists and scientists, with a slight touch of history and humour. The goal of this project had from the start been to surpass the current standard in the martial arts literary market, and offer readers worldwide something which they have never seen before. In essence, a book in which are found countless answers for martial arts practitioners which they cannot be read elsewhere, which address commonly discussed martially-related topics with breadth and depth unparalleled in other works to this day (in any language). It holds among its pages no less than 220,000 words, containing knowledge which would be coveted by many. The aim of this book is to present the reader a coherent, clear-cut, and in-depth view of some of the most perplexing and controversial subjects in the world of martial arts, as well as providing a healthy dose of philosophical outlook on these subjects (from various individuals). At its core is the author's aspiration to build a stronger theoretical foundation for the discussion of martial arts, while addressing matters in innovative ways, which I have come to believe, would help people to better grasp the nature of these arts. There are books by authors who will tell you that some aspects of the martial arts are too complex for concrete, coherent and defined explanations. Others have used ambiguous terminology to explain what they could not pronounce otherwise. This is no such book. This book was written to provide you with the solid, applicable answers and ideas that you could actually understand, and take away with you. This book is mainly comprised of three parts: | Part I: From the Inside Out — External and Internal Gong Fu | This is essentially mostly a very long & thorough discussion of martial arts theory and practice. Traditional and modern concepts and methods are discussed through the mediums of Physiology, Biology, Anatomy, Psychology, Philosophy (Western and Oriental alike), sports science, and the author's personal experiences. The Internal Martial Arts of China receive a special, lengthier treatment in this part of the book. | Part II: Contemplations on Controlled Violence | This one is of a Philosophical and Psychological nature, and contains the author's thoughts on the martial arts and their manifestation in our daily lives, with guest-articles by various martial arts teachers. | Part III: The Wisdom of Martial Spirits: Teachers, and the Things They Hold Dear | This part includes various interesting and comprehensive interviews with distinguished martial arts masters, spanning dozens of pages each. Every one of the interviewees is a person whose views and ideas are thought provoking and well-worth reading. The teachers interviewed in this book are: Master Chen Zhonghua (Chen Taiji Quan) Master Yang Hai (Xing Yi Quan, Bagua Zhang and Chen Taiji Quan) Shifu Strider Clark (Tongbei Quan, Wu style Taiji, Shuai Jiao and more) Shifu Neil Ripski (Traditional Drunken Fist and many others) Sifu James Cama (Buddha Hand Wing Chun and Southern Praying Mantis) Itzik Cohen Sensei (Shito-ryu Karate) No matter the age, rank, status or experience — this book was written for everyone who see themselves part of the martial arts community. It is my sincere hope that any person who reads this book will benefit from the time he or she had spent doing so. May this work encourage others to continue intelligent writing and research in the field, as I was pushed forth and built upon the knowledge others have shared before me. May you have a pleasant reading experience! =]
