Nuclear power is often characterized as a "green technology." Technologies are rarely, if ever, socially isolated artefacts. Instead, they materially represent an embodiment of values and priorities. Nuclear power is no different. It is a product of a particular political economy and the question is whether that political economy can helpfully engage with the challenge of addressing the environmental crisis on a finite, inequitable and shared planet. For developing countries like India, who are presently making infrastructure investments which will have long legacies, it is imperative that these investments wrestle with such questions and prove themselves capable of sufficiency, greater equality and inclusiveness. This book offers a critique of civilian nuclear power as a green energy strategy for India and develops and proposes an alternative "synergy for sustainability." It situates nuclear power as a socio-technical infrastructure embodying a particular development discourse and practice of energy and economic development. The book reveals the political economy of this arrangement and examines the latter's ability to respond to the environmental crisis. Manu V. Mathai argues that the existing overwhelmingly growth-focused, highly technology-centric approach for organizing economic activity is unsustainable and needs to be reformed. Within this imperative for change, nuclear power in India is found to be and is characterized as an "authoritarian technology." Based on this political economy critique the book proposes an alternative, a synergy of ideas from the fields of development economics, energy planning and science, technology and society studies.

The issue of socio-economic inequality has become an increasingly important question for journalism and the academy. The 2008 economic crisis and the years of austerity which followed exasperated class and regional division and as an even greater economic shock emerges from the aftermath of the Covid 19 pandemic, the role of journalism and the wider media in the production and reproduction of inequality assumes greater importance. This edited collection includes eight chapters examining instances of where inequality is examined in the media, for example coverage of Thomas Piketty, precarity, corporate tax rates and race-, class- and gender-related issues, in order to address the following questions: Does journalism treat the issue of inequality in a satisfactory fashion? Does journalism challenge powerful interests, or does journalism play an ideological role in the reproduction of structures of inequality itself? How do increasingly poor working conditions of journalists impact on the coverage of inequality? The chapters in this book were originally published as a special issue of the Critical Discourse Studies journal.

Drawing on postmodern theory's insights regarding discourse, ideology and power, this book explores the ways in which Paul navigated fluctuating and complex relationships of power with his churches, contributing to a discourse that defined the power dynamics of early Christianity. With respect to his own converts as well as to other leaders of the early church, and in the heart of his theological language, Paul is seen to take part in a discourse that reinforces his apostolic authority.

This book critically explores from a comparative international perspective the role medicine plays in constructing and managing natural and social risks, including those belonging to modern medical technology and expertise. Drawing together chapters written by professional practitioners and social scientists from the UK, South America, Australia and Europe, the book offers readers an insightful and thought-provoking analysis of how modern medicine has transformed our understanding of both ourselves and the world around us, but in so doing has arguably failed to fully recognize and account for, its unintended and negative effects. This is an essential read for social scientists, practitioners and policymakers who want to better understand how they can develop new ways of thinking about how modern medicine can promote social goods and enhance public health.

Publisher Description

Blending concepts from 'dramatism' such as 'victimage ritual' with Foucault's approach to modern power and knowledge regimes, this book presents a novel and illuminating perspective on political power and domination resulting from the global war on terrorism. With attention to media sources and political discourse within the context of the global war on terror, the author draws attention to the manner in which power elites construct scapegoats by way of a victimage ritual, thus providing themselves with a political pretext for extending their power and authority over new territories and populations, as well as legitimating an intensification of domestic surveillance and social control. A compelling analysis of ritual rhetoric and political violence, Power, Discourse and Victimage Ritual in the War on Terror will be of interest to sociologists, political theorists and scholars of media and communication concerned with questions of surveillance and social control, political communication, hegemony, foreign policy and the war on terror.

George Orwell set out 'to make political writing into an art', and to a wide extent this aim shaped the future of English literature – his descriptions of authoritarian regimes helped to form a new vocabulary that is fundamental to understanding totalitarianism. While 1984 and Animal Farm are amongst the most popular classic novels in the English language, this new series of Orwell's essays seeks to bring a wider selection of his writing on politics and literature to a new readership. In Politics and the English Language, the second in the Orwell's Essays series, Orwell takes aim at the language used in politics, which, he says, 'is designed to make lies sound truthful and murder respectable, and to give an appearance of solidity to pure wind'. In an age where the language used in politics is constantly under the microscope, Orwell's Politics and the English Language is just as relevant today, and gives the reader a vital understanding of the tactics at play. 'A writer who can – and must – be rediscovered with every age.' — Irish Times

In today's post-modern and post-traditional institutions, power is mainly exercised through the generation of consent, through the distribution of ideologies and through the subtle indoctrination of self-disciplining practices, rather than through the use of force or brute authority. This change in the nature of institutional practices focuses the role that language has always had in the exercise of power. To address the topic as it affects educational organisations, the editor combines two central traditions in contemporary social science inquiry; concern for the post-modern and post-positivist condition of the contemporary world; and concern for the praxis of critical theory. Contributors to the book's 14 chapters approach their topics from either or both of these traditions. In his introductions to the two parts of the book, the editor suggests how these traditions can combine and at the same time respond to the challenges of educational concerns within the post-modern condition. This book's style and content should appeal to students and researchers in educational research, curriculum studies, policy studies and educational administration. The authors are all noted for their contributions to the analysis of discourse and its power co-ordinates. They will introduce some readers to new worlds - the worlds of teacher supervision, female leadership, critical language awareness, the signing deaf and minority outgroups.

Excerpt from Origin and Causes of Democracy in America: A Discourse by George W. Burnap The existence and wonderful prosperity of this nation, are fixed facts, and the lesson they read is not likely to be lost upon the world. Nations, like individuals, have their peculiar organic type, by which they are distinguished from each other. It is early manifested, and when once fixed, has the power of perpetuating itself through countless generations. Nationality seems to have a mysterious, creative, and transforming power. Like that vital energy, which determines the species of the trees of the forest, it has the power of assimilating all things to itself. The oak and the pine spring up, side by side, out of a common soil, and draw nourishment from the same elements, yet one converts those elements into the peculiar wood and foliage of the straight and lofty pine, the other into the low and gnarled oak. So nationality, operating upon the elements of a common humanity, assimilates it to its own type, transmits that type from age to age, and transforms to its own liken whatever foreign element is thrown into it. What can be more different from each other, than the two nations which the British Channel separates? The Alps and the Pyrenees divide nations no less diverse from each other. It is not soil, it is not climate, for what more different than the ancient Roman and the modern Italian? What more dissimilar than the magnanimous soldiers of Alexander, and the cowering slaves who have so long kissed the footstool of the Ottoman throne? We have existed long enough to develop and to exhibit our national characteristics. The most prominent of these, as I have already said, is Democracy. I mean, of course, in no sectarian or party sense. I mean a government constituted and administered by the people themselves. I mean a Democracy, in contradistinction to a Despotism, a Monarchy an Aristocracy; and as equally distinguished from Anarchy, Agrarianism, and Socialism. The formation of this great Republic in the western hemisphere, was a result wholly unforeseen and unpremeditated.
