Our earth has natural electromagnetic energy, and over millions of years we have evolved to live in harmony with it. In our modern world, however, human-made electromagnetic fields are increasingly common -- wifi and mobile phone networks, for example. Katie Singer argues that these fields are now so prevalent that they are threatening the health of all aspects of our world -- people, plants, bees and birds -- and in particular our memory, DNA, behaviour, attention spans, sleep patterns and susceptibility to disease. This unique book examines the effects of electrification and presents solutions for communities and individuals who welcome the benefits of our digital world, but want to limit their exposure to electromagnetic radiation.

The text begins by introducing the physical and mathematical fundamentals of electric fields, presenting problems from power and dielectric engineering to show how the theories are put into practice. The book then describes various techniques for electric field analysis and their significance in the validation of numerically computed results, as well as: Discusses finite difference, finite element, charge simulation, and surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination, around a post insulator, in a condenser bushing, and around a gas-insulated substation (GIS) spacer Explores numerical field calculation for electric field optimization, demonstrating contour correction and examining the application of artificial neural networks Explains how high-voltage field optimization studies are carried out to meet the desired engineering needs Electric Field Analysis is accompanied by an easy-to-use yet comprehensive software for electric field computation.
