In the face of constant change, the nature of business must evolve rapidly if it is to remain relevant to society at large. How then should business change to meet the requirements of the 21st century, in which unbridled globalization and technological advancements are having profound affects on the wellbeing and prosperity of both the people and the planet? The achievement of purpose is the key to successful transformation - not just having a purpose, but making that purpose real at every level of the organization. This is the first book to provide a precise description of how companies can put purpose into practice. Based on a groundbreaking research project undertaken jointly between the Saïd Business School at the University of Oxford and Mars Catalyst, the think tank of Mars Inc., it provides a highly accessible account of how companies should determine and implement their corporate purposes. It outlines why corporate purpose is so important and how it can both address the major challenges the world faces today and deliver enhanced performance for

business. Fourteen detailed case studies illustrate how companies of different sizes, sectors, and geographies have put purpose into practice and their experiences of doing so. These cases give deep insights into the way in which companies can build purposeful businesses, map and shape their ecosystems, identify failures and problems, align management, and create partnerships to deliver their purposes against which they can measure their performance. The achievement of purpose is a very real issue that every responsible leader in business, finance, and business academia must now face. This book will equip executives, managers, investors, and policymakers with the tools that they require to understand how the notion of corporate purpose should become a corporate reality.

Introduction to Business covers the scope and sequence of most introductory business courses. The book provides detailed explanations in the context of core themes such as customer satisfaction, ethics, entrepreneurship, global business, and managing change. Introduction to Business includes hundreds of current business examples from a range of industries and geographic locations, which feature a variety of individuals. The outcome is a balanced approach to the theory and application of business concepts, with attention to the knowledge and skills necessary for student success in this course and beyond.

This book gathers selected papers presented at the 2019 International Conference on Integrated Science in Digital Age (ICIS 2019), which was jointly supported by the Institute of Certified Specialists (ICS), Russia and Springer and held in Batumi, Georgia on May 10 – 12, 2019. The ICIS 2019 received roughly 50 contributions, by authors hailing from six countries. Following a peer-review process, the

Scientific Committee – a multidisciplinary group of 110 experts from 38 countries around the globe – selected roughly 60% for publication. The main topics covered include: Artificial Intelligence Research; Digital Business & Finance; Educational Sciences; Health Management Informatics; Public Administration in the Digital Age; and Social Problem-solving.

The book presents the best contributions from the international scientific conference “ Growth Poles of the Global Economy: Emergence, Changes and Future, ” which was organized by the Institute of Scientific Communications (Volgograd, Russia) together with the universities of Kyrgyzstan and various other cities in Russia. The 143 papers selected, focus on spatial and sectorial structures of the modern global economy according to the theory of growth poles. It is intended for representatives of the academic community: university and college staff developing study guides on socio-humanitarian disciplines in connection with the theory of growth poles, researchers, and undergraduates, masters, and postgraduates who are interested in the recent inventions and developments in the field. It is also a valuable resource for expert practitioners managing entrepreneurial structures in the existing and prospective growth poles of the global economy as well as those at international institutes that regulate growth poles. The first part of the book investigates the factors and conditions affecting the emergence of the growth poles of the modern global economy. The second part then discusses transformation processes in the traditional growth poles of the global economy under the influence of the technological progress. The third part examines how social factors affect the formation of new growth poles of the modern global economy. Lastly, the fourth part offers perspectives on the future growth of the global economy on the basis of the digital economy and Industry 4.0.

Businesses must constantly adapt to a dynamically changing environment that requires choosing an adaptive and dynamic information architecture that has the flexibility to support both changes in the business environment and changes in technology. In general, information systems reengineering has the objective of extracting the contents, data structures, and flow of data and process contained within existing legacy systems in order to reconstitute them into a new form for subsequent implementation. Information Systems Reengineering for Modern Business Systems: ERP, Supply Chain and E-Commerce Management Solutions covers different techniques that could be used in industry in order to reengineer business processes and legacy systems into more flexible systems capable of supporting modern trends such as Enterprise Resource Planning (ERP), supply chain management systems and e-commerce. This reference book also covers other issues related to the reengineering of legacy systems, which include risk management and obsolescence management of requirements.

Covers receipts and expenditures of appropriations and other funds.
