Chat transcript. Economic and community development are important arenas for social workers to be practicing. Economic development is one way that the world attempts to combat poverty. Yet, it is usually a linear process, simply put, of building infrastructure, increasing jobs and income. As social workers, we rarely engage in economic development work except as service provision to help clients be financially savvy, to teach them to gain employment, or in the myriad of anti-poverty efforts.

The nonprofit sector has changed in fundamental ways in recent decades. As the sector has grown in scope and size, both domestically and internationally, the boundaries between for-profit, governmental, and charitable organizations have become intertwined. Nonprofits are increasingly challenged on their roles in mitigating or exacerbating inequality. And debates flare over the role of voluntary organizations in democratic and autocratic societies alike. The Nonprofit Sector takes up these concerns and offers a cutting-edge empirical and theoretical assessment of the state of the field. This book, now in its third edition, brings together leading researchers—economists, historians, philosophers, political scientists, and sociologists along with scholars from communication, education, law, management, and policy schools—to investigate the impact of associational life. Chapters consider the history of the nonprofit sector and of philanthropy; the politics of the public sphere; governance, mission, and engagement; access and inclusion; and global perspectives on nonprofit organizations. Across this comprehensive range of topics, The Nonprofit Sector makes an essential contribution to the study of civil society.

"This resource book discusses the economic arguments that could (and could not) be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities. It provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities, including what the major challenges are in this assessment. It illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas: education, social protection, and urban development and infrastructure. It describes whether education policy, social protection, and urban development, housing and transport policy can act as health policy"...

This book offers a rethinking of the burgeoning research on not-for-profit organizations and socially responsible economics. Adopting a comparative approach, the chapters explore and reinterpret the impact of social enterprises on the provision of general-interest services, work integration, microfinance, and fair trade, and show how these enterprises form the hub of an emerging economy of social responsibility. The book provides a new interpretation of social enterprises as entrepreneurial organizations that pursue social objectives and are successful due to the non-self-seeking motives of their members. This book will be of interest to postgraduate students, professionals working in the not-for-profit sector, and scholars interested in socially responsible economics. It is particularly suitable for seminars and workshops focusing on the management of not-for-profit organizations, sustainable development, and globalization.

This book explores the intersectional perspective of sustainable social development in key sectors, such as education and skill development, health and nutrition, gender concerns, and food security and agriculture in India. It delves into contemporary concerns of poverty, employment and inclusive growth, and social marginalisation and inequality. The volume brings together the contributions of various stakeholders from academia, research organisations, NGOs and policymakers to address social-sector issues and sustainable development goals (SDGs) in the Indian context. It reflects on policies, strategies and performance in the context of Constitutional goals and the commitment to global SDGs and examines the character and contours of social development in the country. Comprehensive and topical, this volume will be useful to scholars, researchers, policymakers and practitioners of development studies, political studies, sociology and development economics.

"This book will be of interest to anyone interested in the technical detail of funding mechanisms, and those not so inclined will still find plenty of thought-provoking material to explore. ... This book is a treasure-trove of empirical data, theoretical discussion, and practical application, and also as a useful indicator of how much of Europe understands social protection." - Citizen's Income

Government investments in social sector has always played an important role in tackling social issues and facilitated in the alleviation of poverty. Hence, budgetary expenditure to be mobilized for such investments needs to be efficiently allocated and utilized to maximize the greatest good. This book focuses on the social sector in India and provides an overview of the sector. The book looks at 15 major Indian states between the year 2000-2011 to see how these states had invested in social sector and whether they had met the criteria of efficient social sector investment. Using stochastic frontier models, the book provides an efficiency norm and making use of this normative estimate, it compares performance across 15 Indian states and suggests important policy implications to improve the future performance of the social sector. The book adopts various quantitative techniques in the analysis and establishes that inefficient and inappropriate allocation of inputs was made in both health and education sectors. The book suggests that such problems and future challenges could be overcome by an appropriate mix of emphasis in different activities. This book will provide insight for those who want to learn more about how to build the capacity of the social sector in more efficient manner by exploring the social sector of India.
