Go Green-Go Electric! Faster, Cheaper, More Reliable While Saving Energy and the Environment " Empowering people with the tools to convert their own vehicles provides an immediate path away from petroleum dependence and should be part of the solutions portfolio. " – Chelsea Sexton, Co-founder, Plug In America and featured in Who Killed the Electric Car? " Create a superior driving experience, strengthen America, and restore the planet ' s ecosystems...that ' s the promise of this book and it ' s well worth a read! " – Josh Dorfman, Founder & CEO – Vivavi, Modern Green Furniture Store, Author, The Lazy Environmentalist: Your Guide to Easy, Stylish, Green Living. This new, updated edition of Build Your Own Electric Vehicle contains everything that made the first edition so popular while adding all the technological advances and new parts that are readily available on the market today. Build Your Own Electric Vehicle gets on the expressway to a green, ecologically sound, cost-effective way that even can look cool, too! This comprehensive how-to goes through the process of transforming an internal combustion engine vehicle to electric or even building an EV from scratch for as much or even cheaper than purchasing a traditional car. The book describes each component in detail--motor, battery, controller, charger, and chassis--and provides step-by-step instructions on how to put them all together. Build Your Own Electric Vehicle, Second Edition, covers: EV vs. Combustible Engine Overview Environmental and Energy Savings EV Evolution since the First Electric Car Current Purchase and Conversion Costs Chassis and Design Today's Best Motors Battery Discharging/Charging Styles Electrical Systems Licensing and Insurance Issues Driving Maintenance Related Clubs and Associations Additional Resources

Smart Cities Policies and Financing: Approaches and Solutions is the definitive professional reference for harnessing the full potential of policymaking and financial planning in smart cities. It covers the effective tools for capturing the dynamic relations between people, policies, financing and environments, and where they are most often useful and effective for all relevant stakeholders. Brings together experts from academia, government and industry to offer state-of-the-art solutions for improving the lives of billions of people in cities around the globe Demonstrates practical implementation through real-life case studies Enhances reader comprehension using learning aids such as hands-on exercises, checklists, chapter summaries, review questions, and an extensive appendix of additional resources

ITShades.com has been founded with singular aim of engaging and enabling the best and brightest of businesses, professionals and students with opportunities, learnings, best practices, collaboration and innovation from IT industry. This document brings together a set of latest data points and publicly available information relevant for Travel & Transportation Industry. We are very excited to share this content and believe that readers will benefit from this periodic publication immensely.

The Pew Group provides one of the thirteen essays here, plainly stating that hybrid and electric cars make the United States more competitive, so why don't we see these cars everywhere? Readers will explore this issue across several topics relating to these cars, including what to do with mileage taxes, whether the government should subsidize the cars, and why China does not embrace these cars.

This document brings together a set of latest data points and publicly available information relevant for Manufacturing Industry. We are very excited to share this content and believe that readers will benefit from this periodic publication immensely.

This anthology explores the issue of the United States' dependence on oil. Can the country attain energy independence? Does the dependence on foreign oil weaken the economy? Is dependence on foreign oil a security threat? Can the United States transition from oil if it must, or is the country too deeply invested? This book gives evidence to both sides of these questions. Features previously published content from sources such as Jordan Weissman, Anne Korin, Pew Charitable Trusts, and the National Corn Growers Association.

This book addresses various aspects of electric mobility deployment in public transport. These include transport policy-related issues as well as technical, organizational and technical dimensions of the fleet conversion process (from conventional one towards the increased share of electric vehicles in public transport). In the book, one may find, e.g. the determinants for the successful functioning of electrified transport systems (including charging facilities), models and methods for battery electric bus energy consumption, the analysis regarding the charging strategies (including power-grid) as well as electric vehicle battery issues. As the process of fleet conversion is multi-faceted, the book also contains the issues related to cybersecurity in public transport, autonomous vehicles and hyperloop. The book is dedicated to transport professionals, consulting companies and researchers in the field of electromobility and modern transport systems.
