This book is based upon the principle that an understanding of devices and circuits is most easily achieved by learning how to design circuits. The text is intended to provide clear explanations of the operation of all important electronics devices generally available today, and to show how each device is used in appropriate circuits. Circuit design and analysis methods are also treated, using currently available devices and standard value components. All circuits can be laboratory tested to check the authenticity of the design process. Coverage includes: Diodes, BJTs, FETs, Small-Signal Amplifiers, NFB Amplifiers, Power amplifiers, Op-Amps, Oscillators, Filters, Switching Regulators, and IC Audio amplifiers.

This lab manual accompanies Electronic Devices and Circuits, 4/e.

The content has been carefully designed to meet the requirements of first and second year students of electronic engineering, communications engineering and telecommunications, following full honours degree programs or two-year courses including HNC/HND. A completely new analog electronics textbook for the digital age Coverage ideal for courses with a communications / wireless focus

This volume extensively covers semiconductor pulse circuits, explaining circuit operation and analysis and discusses in detail practical pulse circuit design methods.
