A HazMat team evacuates five square miles of a city business district in response to a chemical spill. Ten city blocks away, a police special response team forms a perimeter around an office building where a terrorist threatens the release of a deadly chemical agent. Meanwhile, paramedics administer first aid to victims exposed to a possible vesicant. In the real-life world of emergency response, nothing is more crucial to crisis personnel than quick and decisive action. D. Hank Ellison's Emergency Action for Chemical and Biological Warfare Agents tells police, paramedics, and firefighters just what actions to take in the event of a crisis involving hazardous materials. The book contains abridged versions of the class indices from Ellison's larger Handbook of Chemical and Biological Warfare Agents. The indices deal with classes of agents (nerve, blister, etc.) instead of focusing on specific agents. Each index contains information on the toxicology/health impacts, physical characteristics, hazards from fire or reactivity, protection of personnel, and general first aid for that agent class. Designed to provide rapid access to critical emergency information at the scene of a release of chemical or biological warfare agents, this handy field guide is also ideal for facilitating the coordination with off-site personnel who have access to more comprehensive information in Ellison's larger Handbook. It differs from its larger companion, however, in that agent specific data, as well as information on evacuation distances, are listed in table format, making it the ideal tool for emergency responders deployed in the field.

Terrorism threats and increased school and workplace violence have always generated headlines, but in recent years, the response to these events has received heightened media scrutiny. Critical Incident Management: A Complete Resource Guide, Second Edition provides evidence-based, tested, and proven methodologies applicable to a host of scenarios that may be encountered in the public and private sector. Filled with tactical direction designed to prevent, contain, manage, and resolve emergencies and critical incidents efficiently and effectively, this volume explores: The phases of a critical incident response and tasks that must be implemented to stabilize the scene Leadership style and techniques required to manage a critical incident successfully The National Incident Management System (NIMS) and the Incident Command System (ICS) Guidelines for responding to hazardous materials and weapons of mass destruction incidents Critical incident stress management for responders Maintaining continuity of business and delivery of products or services in the face of a crisis Roles of high-level personnel in setting policy and direction for the response and recovery efforts Augmented by Seven Critical Tasks™ that have been the industry standard for emergency management and response, the book guides readers through every aspect of a critical incident: from taking initial scene command, to managing resources, to resolution, and finally to recovery and mitigation from the incident. The authors' company, BowMac Educational Services, Inc., presently conducts five courses certified by the Department of Homeland Security. These hands-on "Simulation Based" Courses will prepare your personnel to handle any unexpected scenario. For additional information contact: 585-624-9500 or johnmcneall@bowmac.com.

The NIOSH Pocket Guide to Chemical Hazards presents information taken from the NIOSH/OSHA Occupational Health Guidelines for Chemical Hazards, from National Institute for Occupational Safety and Health (NIOSH) criteria documents and Current Intelligence Bulletins, and from recognized references in the fields of industrial hygiene, occupational medicine, toxicology, and analytical chemistry. The information is presented in tabular form to provide a quick, convenient source of information on general industrial hygiene practices. The information in the Pocket Guide includes chemical structures or formulas, identification codes, synonyms, exposure limits, chemical and physical properties, incompatibilities and reactivities, measurement methods, respirator selections, signs and symptoms of exposure, and procedures for emergency treatment.
