This is the United Nations definitive report on the state of the world economy, providing global and regional economic outlook for 2020 and 2021. Produced by the Department of Economic and Social Affairs, the five United Nations regional commissions, the United Nations Conference on Trade and Development, with contributions from the UN World Tourism Organization and other intergovernmental agencies.

This book focuses on how to improve the quality of jobs and meet the aspirations of youth in Sub-Saharan Africa. It finds that a strong foundation for human capital development can be key to boosting earnings, arguing for a balanced approach that builds skills and demand for labor.

"This publication is a compilation of presentations and recommendations resulting from the Global Conference on Inland Fisheries: Freshwater, Fish and the Future, convened at FAO HQ in January 2015 and is part of an MOU signed with Michigan State University. Contents include scientific papers on inland fisheries from a global perspective that cover biological and socio-cultural assessments, drivers and governance issues. Ten steps to responsible inland fisheries are included along with recommendations for their implementation."--

Aquaculture the farming of fish and aquatic plants has become the world's fastest-growing food production sector, even as the amount of wild fish caught in our seas and freshwaters declines. From fish foods and pharmaceuticals to management of entire aquatic ecosystems, aquaculture is truly changing the face of the waters. Increased growth, however, brings increased risk, and aquaculture now lies at a crossroads. One direction points toward the giant strides in productivity, industry concentration, and product diversification. Another direction points toward the dangers of environmental degradation and the marginalization of small fish farmers. Yet another direction invites aquaculture to champion the poor and provide vital environmental services to stressed aquatic environments. 'Changing the Face of the Waters' offers a cutting-edge analysis of the critical challenges facing aquaculture, balancing aquaculture's role in economic growth with the need for sound management of natural resources. The book also provides guidance on sustainable aquaculture by evaluating alternative development pathways, placing particular emphasis on the application of lessons from Asia to Sub-Saharan Africa and Latin America. Aimed at policy makers, planners, and scientists, this book provides a comprehensive frame of reference for orienting ideas and initiatives in this dynamic industry.

The World Social Report 2021 points to new directions in which rural development strategies need to be reconsidered. It offers strategic principles, programs of action, and a set of concrete policies that can be combined to devise effective strategies to help realize the potential of rural development and achieve the SDGs. Reexamining the narrow view of rural development, it expands the discussion to include the role of development in achieving the wider set of SDGs. In doing so, it pays particular attention to the interaction of rural development with SDG 6 (clean water and sanitation), SDG 8 (economic growth and decent work), SDG 9 (infrastructure), SDG 11 (sustainable communities), SDG 13 (climate change), SDG 14 (life below water) and SDG 15 (life on land). The interlinkages of all these Goals suggest that there exist potential synergies between rural development and sustainable efforts in many other directions.

The State of the World's Land and Water Resources for Food and Agriculture is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

The sixth edition of the series highlights employment trends in renewables worldwide, noting increasing diversification of the supply chain.
