Two broad areas of environmental science that seemed important to me weren't covered in
the existing textbooks. One of these is global concerns. We live in an highly interconnected
world; the coal burned in China, or the nuclear waste dumped in the ocean by Russia, or the
pesticides used on farm crops in Central America affect all of us.

of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one- or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. We have updated data throughout the chapters in this book. Information and examples presented are the most recent available as of the mid-2009. You will find an abundance of specific numbers and current events – details that are difficult to keep up-to-date in a textbook. The goal of this book is to provide an up-to-date, introductory global view of essential themes in environmental science along with emphasis on details and case studies that will help students process and retain the general principles. Because most students who will use this book are freshman or sophomore non-science majors, the authors make the text readable and accessible without technical jargon or a presumption of prior science background.

The environment knows no borders. The new Canadian edition of the market-leading Cunningham Environmental Science book illustrates just that, but with local case studies, coverage, challenges and policies. The organization of the text has been redone to better reflect trends across Canada in Environmental Science. Environmental Science by Cunningham et al has a unique balance between science and issues. Armed with knowledge of the science of the environment, students and instructors are able to better understand the policies that come out of scientific knowledge (or in some cases, the science that grows out of the policies). This is the most truly balanced book on the market in Canada. A contributing editor was brought in on this project (Dan Shrubsole, UWO) to team up with the Canadian author (Robert Bailey, UWO) for a truly Canadian section on policy and law. These chapters, while remaining global in overall scope, are the most detailed Canadian policy and law chapters on the market today in Environmental Science. Case studies, vignettes and text throughout includes water crises from North Battleford, Sask. and Walkerton, Ont. To illustrate the challenges of sustainable urban centres, the once-thriving Vancouver downtown east side gets centre stage with their Vancouver agreement as an example of Canada's three levels of government coming together. The Sydney Tar Ponds illustrate the various toxicities associated with past use of the land, and the difficulties and possibilities for the future. In other chapters, the issue of placer mining in the Yukon is explained in detail - the political issues as well as the livelihood of the local population. After all, northern Canada is a large part of the country that can be often ignored. Another example: Four cases which went through the Canadian courts are detailed in one vignette. Each of these are explained in detail, and students are asked to decide: Would you prosecute? At the end of the chapter the actual (and at times surprising) outcomes of these trials are then discussed. These real stories from around the world open up discussion and prompt the student to be more interested in the policy and law of the environment, both in Canada and across the world. After all, as the discussion on the Kyoto Protocol will show, the environment knows no borders. The new edition of this market-leading Environmental Science text offers a wealth of new technology for you and your students. Each text will be packaged FREE with an Essential Study Partner CD-ROM for students and our cool new Online Learning Center website. More than 300 colour photos illustrate examples throughout chapters, both adding information and piquing interest. Approximately 10% percent of these are new and updated, reflecting the Canadianization as well as more current global cases. More than 250 figures illustrate environmental stats and trends throughout the world as well as more home-grown Canadian data. Approximately 10% of figures are new and updated. More than 60 tables are incorporated throughout this text. Almost 20% of these figures are new or revised to update the data or Canadianize the data. This text is not just science, not just policy. IT doesn't concern Canada alone, but rather the entire environment, which has no borders. This is a

truly balanced text that will not only pique interest in students who take this as an elective, but is a high enough level to serve as a basis for those who continue their studies in environmental science.

Environmental Science: A Global Concern is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. As practicing scientists and educators, the Cunningham author team brings decades of experience in the classroom, in the practice of science, and in civic engagement. This experience helps give students a clear sense of what environmental science is and why it matters in this exciting, new 13th edition.

Environmental Science: A Global Concern provides readers with an up-to-date, introductory global view of essential themes in environmental science. The authors balance evidence of serious environmental challenges with ideas about what we can do to overcome them. An entire chapter focuses on ecological restoration; one of the most important aspects of ecology today. Case studies in most chapters show examples of real progress, and “ What Can You Do? ” lists give students ideas for contributing to solutions.

Environmental Science: A Global Concern is a comprehensive presentation of environmental science for non-science majors which emphasizes critical thinking, environmental responsibility, and global awareness. This book is intended for use in a one or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level.

This book is intended for use in a one- or two-semester course in environmental science, human ecology, or environmental studies at the college or advanced placement high school level. Because most students who will use this book are freshman or sophomore nonscience majors, the authors have tried to make the text readable and accessible without technical jargon or a presumption of prior science background. At the same time, enough data and depth are presented to make this book suitable for many upper-division classes and a valuable resource for students who will keep it in their personal libraries after their formal studies are completed. The goal of this book is to provide an up-to-date, introductory view of essential themes in environmental science along with emphasis on details and case studies that will help students process and retain the general principles.
