The new edition of this essential resource covers core areas of respiratory care in a convenient outline format that makes it a great quick-reference guide, a handy review tool for credentialing examinations, and a comprehensive reference guide for clinical practice. Key topics include basic science; anatomy and physiology of the respiratory, cardiovascular, renal, and neurological systems; and therapeutic aspects of neonatal, pediatric, and adult respiratory care. Also features extensive coverage of pharmacology and infection control. The convenient outline format breaks information down into manageable bits of information that make it ideal for study, review, and quick reference The comprehensive coverage of key topics - from introductory material through therapeutic care - consolidates the full spectrum of respiratory care into one essential resource Completely updated to reflect the significant advancements in the field of respiratory care Reflects the required core content of the most recent National Board for Respiratory Care (NBRC) examination matrix, ensuring the most up-to-date competency requirements for certification Features new chapters on ventilatory management for obstructive pulmonary disease, adult respiratory distress syndrome, NIPPV, tracheal gas insufflation, prone positioning, and liquid ventilation A redesigned format provides easier navigation through the text

A new edition of the classic text, is for respiratory care students who desire a complete and up to date exploration of the technical and professional aspects of respiratory care. With foundations in evidence-based practice, this resource reviews respiratory assessment, respiratory therapeutics, respiratory diseases, basic sciences and their application to respiratory care, the respiratory care profession, and much more. Edited and authored by leading experts, it incorporates the latest information on the practice of respiratory care into a well-organized, reader-friendly guide to help students learn to develop care plans, critical thinking skills, strong communication and patient education skills, and the clinical leadership skills needed to succeed. This text provides essential information in a practical and manageable format for optimal learning and retention. Features include Clinical Practice Guidelines, Key Points, and Respiratory Recaps to help students apply knowledge to practice and retain key information, as well as hundreds of glossary terms with clear definitions, and concise explanations of important concepts and equations. Also includes full color photos and illustrations, and content cross-referencing the NBRC examination matrices.

A long time favorite, the fifth edition of BASIC CLINICAL LAB COMPETENCIES FOR RESPIRATORY CARE: AN INTEGRATED APPROACH continues to bring classroom theory to life at the bedside. Known for its integration of theoretical knowledge and practical skills, this text emphasizes the importance of assessment of need, contraindications, hazards/complications, monitoring, and outcomes assessment in respiratory care. Concise, direct, and easy to understand, this fifth edition has been updated to reflect recent advances in the field in order to ensure that students have the knowledge and skills needed to practice the art and the science of respiratory care. Respiratory Care Calculations, Fourth Edition Revised prepares students to calculate those equations correctly, and then interpret that data in a meaningful way. The end result is patients benefiting from accurate answers and appropriate applications of data.

The newest edition of this comprehensive text highlights the fundamental principles and concepts of basic science material pertinent to the clinical practice of respiratory therapy, and to various aspects of cardiopulmonary physiology, including chemistry, physics, mathematics, microbiology, and physiological chemistry. The text takes many basic science theories, laws, and tenets and applies them to real-life examples. Numerous examples and an appendix of step-by-step solutions and answers to over 500 practice problems are included to guide learners along the path to complete understanding. The text presents learners with multiple opportunities to work through formulas and mathematical problems they will encounter clinically. Quick reference formulas appear on the inside front and back covers directing readers to the specific page where the formula is discussed. (RT, RTT, Respiratory Care, Respiratory Therapy, Resp. Care, Resp. Therapy, RC)

Covering almost all aspects of ventilation management, this book teaches clinical decision-making based on the patient's disease. It features chapters on: non-invasive positive pressure ventilation for acute respiratory failure, home mechanical ventilation, high-frequency ventilation, nitric oxide and helium usage, and partial liquid and TGI.

A favorite among residents and pulmonary fellows, this text provides all the information needed to evaluate and manage respiratory diseases and critically ill patients and to pass the American Board of Internal Medicine's subspecialty exam in pulmonary medicine. The Fifth Edition includes new information on ARDS, sedation of critically ill patients, rehabilitation for COPD, care of elderly patients, genetic testing for asthma, CTA and other diagnostic techniques for pulmonary thromboembolism, new antifungal drugs without renal toxicity, new treatment guidelines for pneumothorax, and ventilators and noninvasive ventilation for respiratory failure. This edition also includes more algorithms and differential diagnosis tables.
