Exploration in EVE involves using scanning probes to locate Cosmic Signatures in space which may contain hackable containers with items inside, resources like gas clouds or ore, wormholes to distant star systems, or collections of NPCs which may drop rare items. As a profession, exploration can be profitable and engaging, and offers better rewards for players willing to travel in more dangerous space.

From the minute I started playing EVE Online, I wanted to get away with something. It didn't have to be an elaborate plan for backstabbing, or a huge pyramind scheme. No, I just wanted to reach out into the dangerous sectors of New Eden and somehow eke out a handsome reward for making it back alive.

Eve University has an excellent guide about safe spots and how to make them. Map your directional scanner (dscan) refresh button to a hotkey. In wormholes, you should be refreshing dscan at LEAST twice a minute and preferably about every 5 seconds during all the time you are uncloaked. This is not exaggerating.

The Revelations expansion (codename Kali) introduces proper exploration to Eve. Over 250 individual exploration sites have been created and added to the game, offering a wide variety of content. Each site is unique, but there are four broad categories they fall into - combat sites, profession sites, mining sites and gas cloud sites.

The unofficial guide to becoming an ISK billionaire in EVE Online.

Although its roots lie in early rocket technologies and the international tensions that followed World War II, the space race began after the Soviet launch of Sputnik 1 on October 4, 1957. The space race became an important part of the cultural and technological rivalry between the USSR and the United States during the Cold War. Modern space exploration is reaching unbelievable areas. Mars is the focal point of space exploration. In the long term, there are tentative plans for manned orbital and landing missions to the Moon and Mars, establishing scientific outposts that will then give way to permanent and self-sufficient settlements. Additional exploration will potentially involve expeditions and settlements on other planets and their moons, as well as the establishment of mining and fueling outposts, particularly in the asteroid belt. Physical exploration outside the solar system will be robotic in the foreseeable future.
