perfect pocket assistant for drivers to use.

This book shows how to build a "INFelecPHY GPS Unit" (IEP-GPS) tracking system for fleet management that is based on 3G and GPRS modules. This model should provide reliability since it deals with several protocols: 1) HTTP and HTTPS to navigate, download and upload in real time the information to a web server, 2) FTTP and FTTPS to handle in a non-real time the files to the web application, and 3) SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device, but without screen for display, it is multifunctional because it links to a GPRS module, a camera, a speaker, headphone, a keypad and screen.

This book shows how to build a "INFelecPHY GPS Unit" (IEP-GPS) tracking system for fleet management that is based on 3G and GPRS modules. The market for GPS tracking services Is a rapidly growing and relatively untapped opportunity for small businesses and entrepreneurs. Currently there are more than twelve million registered commercial vehicles in the USA alone. In Latin America, there are over 20 million. However, a very small percentage of these vehicles are protected by fleet management software. Fortunately,

this has started to change. There are many facets in a GPS car tracking business that are profitable for entrepreneurs (and that's why you should read this guide), including the benefit of recurring revenue from service subscriptions. Before you start your GPS vehicle tracking business, you should consider several steps that will help your company to succeed. Use this guide to walk yourself through some important steps that you must take to launch a successful GPS vehicle tracking business. Finally, In the last chapter of my guide, I introduce a world-class GPS tracking platform provider/vendor that will help you get started, and put your new GPS tracking business on the map. They will ensure you're in business for yourself, but never by yourself. A link to a demo of their GPS tracking software is provided for you so you can learn how their team of GPS experts can start you up in business.

A handy resource for beginning, intermediate, or advanced PowerPoint users, this three-panel guide features helpful time-saving hints so that you can get the most out of Microsoft's dynamic presentation software. Written to follow PowerPoint 2010 (and compatible with PowerPoint 2007), this guide includes helpful screen captures and icons, as well as clear and concise instructions.

GPS Tracking with Java EE Components: Challenges of Connected Cars highlights how the self-driving car is actually changing the automotive industry, from programing embedded software to hosting services and data crunching, in real time, with really big data. The book analyzes how the challenges of the Self Driving Car (SDC) exceed the limits of a classical GPS Tracking System (GTS.) It provides a guidebook on setting up a tracking system by customizing its components. It also provides an overview of the prototyping and modeling process, and how the reader can modify this process for his or her own software. Every component is introduced in detail and includes a number of design decisions for development. The book introduces Java EE (JEE) Modules, and shows how they can be combined to a customizable GTS, and used

Read Online Fleet Management Software Gps Fleet Tracking Telogis

as seed components to enrich existing systems with live tracking. The book also explores how to merge tracking and mapping to guide SDCs, and focuses on client server programming to provide useful information. It also discusses the challenges involved with the live coordination of moving cars. This book is designed to aid GTS developers and engineers in the automotive industry. It can also help Java Developers, not only interested in GPS Tracking, but in modern software design from many individual modules. Source code and sample applications will be available on the book's website.

A central role of a state Department of Transportation (DOT) fleet manager is to maintain a clear understanding of the fleet's costs. This helps in tracking activities over time, comparing costs with other fleets, communicating with stakeholders, and effectively managing fleet assets. The TRB National Cooperative Highway Research Program's NCHRP Research Report 944: Guide to Calculating Ownership and Operating Costs of Department of Transportation Vehicles and Equipment: An Accounting Perspective provides a practical, logical, and transparent framework for conducting fleet cost accounting in state DOTs. The Guide focuses on the unique aspects of DOT fleets, although the principles in the Guide could be extended to any public fleet. Without a complete understanding of fleet costs, the fundamental functions of fleet managers--such as equipment replacement decisions, outsourcing decisions, and budget requests--are diminished. Ultimately, fleet managers need full confidence in their fleet cost numbers to have credibility with fleet stakeholders. The report is accompanied by a PowerPoint presentation summary.

Contributions from Finn Trosby, Kevin Holley, Ian Harris Written to celebrate the 25th anniversary of SMS standardization by the people who produced the standards, Short Message Service (SMS): The Creation of Personal Text Messaging, describes the

Read Online Fleet Management Software Gps Fleet Tracking Telogis

development of the SMS standard and its ongoing evolution. The standardization of SMS started in February 1985 as a part of the creation of the second generation digital cellular system GSM, and the 25th anniversary of the first work on SMS provides an opportunity to review and understand how this service was developed. The book also looks to the future, as a large number of new GSM and evolved GSM phones will support SMS as a mass market high availability messaging service, a new simple Multimedia Messaging Service (MMS) suitable for use by everyone and for implementation in every new terminal is proposed. One of the only books which covers the complete SMS genesis from concept ideas to standardization of a first technical solution and its evolution to the present day. Describes the service concept including the limitation of the message length to 160 characters and explains the rationale behind the concept. Based on existing and newly retrieved documentation. Concludes that SMS has a long future since most future GSM phones will support SMS as the only messaging service, and so an SMS evolution is put forward.

Master's Thesis from the year 2005 in the subject Engineering - Automotive Engineering, grade: Pass, , language: English, abstract: The use of commercial road vehicles has grown with the recent rapid economic growth in the world, but reckless speeding of these heavy vehicles often results in fatal accidents. The Vehicle Speed Warning System is designed and developed to monitor the vehicle speed and raise an alarm if the vehicle has exceeded the preset speed limit. It consists of in-vehicle subsystem, which is fitted into the vehicle, and peripheral interface subsystem connected to the host computer. The system is designed using MC68HC11E9 micro controller. It allows proper calibration of the in-vehicle subsystem and offline data downloading. The microcontroller based Vehicle Speed Warning System has been designed and its application software has been developed. The principal objective in designing this warning system is to present and demonstrate the basic

Read Online Fleet Management Software Gps Fleet Tracking Telogis

concepts of in-vehicle speed detection and wireless data setting and retrieving system, which will serve as a base for future development of vehicle speed monitoring and tracking system.
