I read many reviews about Fundamental Methods of Mathematical Economics - 4th Edition Kevin Wainwright before purchasing it in order to gauge whether or not it would be worth my time, and all praised Fundamental Methods of Mathematical Economics - 4th Edition, declaring it one of the best, something that all readers will enjoy.

For this fourth edition of a text for students of economics, Chiang (University of Connecticut) and Wainwright (British Columbia Institute of Technology) add new chapters on the envelope theorem, advanced topics in optimization, and optimal control theory, and delete a chapter on mathematical programming. The book can serve as a text for a course o

Static (or equilibrium) analysis; Comparative-static analysis; Optimization problems; Dynamic analysis; Mathematical programming and game theory.

It has been 20 years since the last edition of this classic text. Kevin Wainwright, a long time user of the text (British Columbia University and Simon Fraser University), has executed the perfect revision--he has updated examples, applications and theory without changing the elegant, precise presentation style of Alpha Chiang.

Ebook: Fundamental Methods of Mathematical Economics

In this text, Dr. Chiang introduces students to the most important methods of dynamic optimization used in economics. The classical calculus of variations, optimal control theory, and dynamic programming in its discrete form are explained in the usual Chiang fashion, with patience and thoroughness. The economic examples, selected from both classical and recent literature, serve not only to illustrate applications of the mathematical methods, but also to provide a useful glimpse of the development of thinking in several areas of economics.

Alpha C Chiang, a renowned economist, and Professor Emeritus of Economics at the University of Connecticut, is best-known for his classic textbook — Fundamental Methods of Mathematical Economics. In this memoir, he tells the entertaining, scary, embarrassing, glorifying and surreal tales that colored his life. On the academic side, Alpha describes in detail his scholastic journey, including why and how he created one of the most popular books on mathematical methods in economics, as well as the experiences of his teaching career. On the nonacademic side, he describes his ventures into his many hobbies, the spices of his life, including Chinese opera, ballroom dancing, painting and calligraphy, photography, piano, music composition, playwriting, and even magic. Such tales round out the depiction of a colorful life. What's behind his unusual name, Alpha? What schooling disaster tripped him at a young age? What surreal occurrence did he experience at a cliff at age 8? What major miracle changed his family? How did he become a loan shark when he was a graduate student at Columbia University? What Hollywood glamour star mysteriously materialized within inches of him when he was working on a TV show in his student days? How did he conquer a serious phobia and eventually become an acclaimed professor? What motivated his writing of his celebrated book? And what funny, embarrassing, and memorable events occurred in his teaching career? This book is a unique story about a unique life.
