A practicing architect discusses the theoretical background of modern architecture

Pamphlet Architecture was begun in 1977 by William Stout and Steven Holl as an independent vehicle for dialogue among architects, and has become a popular venue for publishing the works and thoughts of a younger generation of architects. Small in scale, low in price, but large in impact, these books present and disseminate new and innovative theories. The modest format of the books in the Pamphlet Architecture Series belies the importance and magnitude of the ideas within.

One of the nation's chief architecture critics reveals how the environments we build profoundly shape our feelings, memories, and well-being, and argues that we must harness this knowledge to construct a world better suited to human experience Taking us on a fascinating journey through some of the world's best and worst landscapes, buildings, and cityscapes, Sarah Williams Goldhagen draws from recent research in cognitive neuroscience and psychology to demonstrate how people's experiences of the places they build are central to their well-being, their physical health, their communal and social lives, and even their very sense of themselves. From this foundation, Goldhagen presents a powerful case that societies must use this knowledge to rethink what and how they build: the world needs better-designed, healthier environments that address the complex range of human individual and social needs. By 2050 America's population is projected to increase by nearly seventy million people. This will necessitate a vast amount of new construction—almost all in urban areas—that will dramatically transform our existing landscapes, infrastructure, and urban areas. Going forward, we must do everything we can to prevent the construction of exhausting, overstimulating environments and enervating, understimulating ones. Buildings, landscapes, and cities must both contain and spark associations of natural light, greenery, and other ways of being in landscapes that humans have evolved to need and expect. Fancy exteriors and dramatic forms are never enough, and may not even be necessary; authentic textures and surfaces, and careful, well-executed construction details are just as important. Erudite, wise, lucidly written, and beautifully illustrated with more than one hundred color photographs, *Welcome to Your World* is a vital, eye-opening guide to the spaces we inhabit, physically and mentally, and a clarion call to design for human experience.

The message passing paradigm is considered the most effective way to develop efficient parallel applications. PVM (Parallel Virtual Machine) and MPI (Message Passing Interface) are the most frequently used tools for programming message passing applications. This volume includes the selected contributions presented at the 10th European PVM/MPI Users' Group Meeting (Euro PVM/MPI 2003), which was held in Venice, Italy, September 29 – October 2, 2003. The conference was jointly organized by the Department of Computer Science of the Ca' Foscari University of Venice, Italy and the Information Science and Technologies Institute of the National Research Council (ISTI-CNR), Pisa, Italy. The conference was previously held in Linz, Austria (2002), Santorini, Greece (2001), Balatonfured, Hungary (2000), Barcelona, Spain (1999), Liverpool, UK (1998), and Krakow, Poland (1997). The first three conferences were devoted to PVM and were held in Munich, Germany (1996), Lyon, France (1995), and Rome, Italy (1994). The conference has become a forum for users and developers of PVM, MPI, and other message passing environments. Interactions between these groups has proved to be very useful for developing new ideas in parallel computing, and for applying some of those already existent to new practical fields. The main topics of the meeting were evaluation and performance of PVM and MPI, extensions, implementations and improvements of PVM and MPI, parallel algorithms using the message passing paradigm, and parallel applications in science and engineering. In addition, the topics of the conference were extended to include Grid computing, in order to reflect the importance of this area for the high-performance computing community.

Elegantly repackaged, *The Morning Pages Journal* is one of *The Artist's Way's* most effective tools for cultivating creativity, personal growth, and change. Now more compact and featuring spiral binding to make for easier use, these Morning Pages invite you to do three pages daily of longhand writing, strictly stream-of-consciousness, which provoke, clarify, comfort, cajole, prioritize, and synchronize the day at hand. This daily writing, coupled with the twelve-week program outlined in *The Artist's Way*, will help you discover and recover your personal creativity, artistic confidence, and productivity. *The Artist's Way Morning Pages Journal* includes an introduction by Julia Cameron, complete instructions on how to use the Morning Pages and benefit fully from their daily use, and inspiring quotations that will guide you through the process.

Celebrating the sesquicentennial anniversary of the completion of the first transcontinental railroad in the United States, *After Promontory: One Hundred and Fifty Years of Transcontinental Railroading* profiles the history and heritage of this historic event. Starting with the original Union Pacific—Central Pacific lines that met at Promontory Summit, Utah, in 1869, the book expands the narrative by considering all of the transcontinental routes in the United States and examining their impact on building this great nation. Exquisitely illustrated with full color photographs, *After Promontory* divides the western United States into three regions—central, southern, and northern—and offers a deep look at the transcontinental routes of each one. Renowned railroad historians Maury Klein, Keith Bryant, and Don Hofsommer offer their perspectives on these regions along with contributors H. Roger Grant and Rob Krebs.

Get ready for another awesome year of gaming with this ultimate guide to the best games including a definitive list of the biggest games of the past year and the new ones coming in 2018. *Game On! 2018*, the most comprehensive guide to all the best games, tech, and YouTube stars, features some of the year's greatest moments including exclusive interviews with YouTube legends like Minecraft superstar CaptainSparklez, top streamers and game developers. This complete guide is packed with information on all the latest gaming hardware, tech, and essential mobile games. Also includes the best gaming secrets, stats, tips, and tricks to help unlock achievements and trophies on games like *Pokémon Sun & Moon*, *LEGO Worlds*, *Zelda: Breath of the Wild*, and so much more! All games featured in *Game On! 2018* are rated T for Teen or younger keeping it appropriate for young gamers.

Elemental is an initiative creating innovative solutions for subsidized housing. The programs urban projects aim to improve social housing for poverty stricken families. Elemental organized an international architecture competition which resulted in 7 constructed projects throughout Chile as hybrids between house and

building, pushing the limits of expansion and density. Built in central areas, these houses are half-constructed, offering the inhabitants the infrastructure to extend the house to personal needs. This book is a fascinating study of the successes and failures of the 'Element Houses.' ELEMENTAL is a Do Tank affiliated with the Pontificia Universidad Católica de Chile and COPEC, implementing urban projects for social interest and public impact.

Tschumi Parc de la Villette is the first publication to document comprehensively Bernard Tschumi's first, and arguably still most celebrated project. With new and republished writing including a text by Bernard Tschumi and Anthony Vidler's "Trick-Track" originally published in 1986, alongside a newly-commissioned essay assessing the Parc from a contemporary and historical perspective, this book documents Parc de la Villette from its conception, through the 30 years of its existence, to the present. Tschumi Parc de la Villette includes drawings, concept sketches, models and photographs showing the development of the Parc over three decades, brought together in a single volume for the first time since the 1980s. One of the "Grands Projets" commissioned by the French Government in the 1980s, Parc de la Villette set a benchmark for urban parks in the latter part of the twentieth century and into the twenty-first. Tschumi constructed a series of follies across the site, creating what he called "the largest discontinuous building in the world". Published to coincide with the 30th anniversary of the Parc, Tschumi Parc de la Villette broadly celebrates the project, and particularly the way in which it has been embraced by generations of Parisians and a diverse international public.
