Cambridge IGCSE Geography Revision Guide has been designed specifically to meet the requirements of Cambridge IGCSE Geography syllabus (0460). It has been written to help students prepare for the Cambridge IGCSE Geography examination. The book instills confidence by improving the students' understanding of key concepts and adds focus to their revision.

The book aims to present 'traditional features' of regional science (as geographical concepts and institutions), as well as relatively new topics such as innovation and agglomeration economies. In particular it demonstrates that, contrary to what has been argued by recent economics literature, both geography and institutions (or culture) are relevant for local development. In fact, these phenomena, along with the movement of goods and workers, are among the main reasons for persisting development differentials. These intriguing relationships are at the heart of the analysis presented in this book and form the conceptual basis for a promising institutional approach to economic geography.

This book illustrates how literature, history and geographical analysis complement and enrich each other's disciplinary endeavors. The Hun-Lenox Globe, constructed in 1510, contains the Latin phrase 'Hic sunt dracones' ('Here be dragons'), warning sailors of the dangers of drifting into uncharted waters. Nearly half a

Download File PDF Geography Paper 1 June 2010 0460 12

millennium earlier, the practice of "earth-writing" (geographia) emerged from the cloisters of the great library of Alexandria, as a discipline blending the twin pursuits of Strabo's poetic impression of places, and Herodotus' chronicles of events and cultures. Eratosthenes, a librarian at Alexandria, and the mathematician Ptolemy employed geometry as another language with which to pursue "earth-writing". From this ancient, East Mediterranean fount, the streams of literary perception, historical record and geographical analysis (phenomenological and Euclidean) found confluence. The aim of this collection is to recover such means and seek the fount of such rich waters, by exploring relations between historical geography, geographic information science (GIS) / geoscience, and textual analysis. The book discusses and illustrates current case studies, trends and discourses in European, American and Asian spheres, where historical geography is practiced in concert with human and physical applications of GIS (and the broader geosciences) and the analysis of text - broadly conceived as archival, literary, historical, cultural, climatic, scientific, digital, cinematic and media. Time as a multi-scaled concept (again, broadly conceived) is the pivot around which the interdisciplinary contributions to this volume revolve. In *The Landscape of Time* (2002) the historian John Lewis Gaddis posits: "What if we were to think of history as a kind of mapping?" He links the ancient practice of mapmaking with the three-part conception of time (past, present, and future). Gaddis presents the practices of cartography and historical narrative as attempts to manage infinitely complex subjects by imposing abstract grids to frame the phenomena being examined— longitude and latitude to frame landscapes and, occidental and oriental temporal scales to frame timescapes. Gaddis contends that if the past is a landscape and history is the way we represent it, then it follows that pattern recognition constitutes a primary form of human perception, one that can be parsed empirically, statistically and phenomenologically. In turn, this volume reasons that literary, historical, cartographical, scientific,

Download File PDF Geography Paper 1 June 2010 0460 12

mathematical, and counterfactual narratives create their own spatio-temporal frames of reference. Confluences between the poetic and the positivistic; the empirical and the impressionistic; the epic and the episodic; and the chronologic and the chorologic, can be identified and studied by integrating practices in historical geography, GIScience / geoscience and textual analysis. As a result, new perceptions and insights, facilitating further avenues of scholarship into uncharted waters emerge. The various ways in which geographical, historical and textual perspectives are hermeneutically woven together in this volume illuminates the different methods with which to explore terrae incognitae of knowledge beyond the shores of their own separate disciplinary islands.

Cities, Regions and Flows presents a theoretical framework for understanding the changing relationship between places and physical movement, and thoughtfully prepared case studies from five continents on how cities relate to value chains, and how they ensure accessibility and urban liveability in an increasingly contested policy environment. Moreover, the book discusses how urban policies attempt to solve related conflicts in terms of infrastructure provision, land use, local labour markets and environmental sustainability. The two subsystems that are of major interest here - urban regions on the one hand, and logistics management and physical distribution on the other - develop in quite distinct, and often contradictory, ways. Whereas urban regions face disintegration due to the expansion of the built environment and the spatio-temporal fragmentation of life-worlds and regional systems, the logistics system itself demands integration in order to keep flows moving and to reduce costs. Physical flows, networks and chains thus have a fundamental impact on urban restructuring.

Transformation to a low carbon economy is a central tenet to any discussion on the solutions to the complex challenges of climate

Download File PDF Geography Paper 1 June 2010 0460 12

change and energy security. Despite advances in policy, carbon management and continuing development of clean technology, fundamental business transformation has not occurred because of multiple political, economic, social and organisational issues. Carbon Governance, Climate Change and Business Transformation is based on leading academic and industry input, and three international workshops focused on low carbon transformation in leading climate policy jurisdictions (Canada, USA and the UK) under the international Carbon Governance Project (CGP) banner. The book pulls insights from this innovative collaborative network to identify the policy combinations needed to create transformative change. It explores fundamental questions about how governments and the private sector conceptualize the problem of climate change, the conditions under which business transformation can genuinely take place and key policy and business innovations needed. Broadly, the book is based on emerging theories of multi-levelled, multi-actor carbon governance, and applies these ideas to the real world implications for tackling climate change through business transformation. Conceptually and empirically, this book stimulates both academic discussion and practical business models for low carbon transformation.

Studies of the escalating tensions and competing claims in the South China Sea overwhelmingly focus on China and its increasingly assertive approach, while the position of the other claimants is overlooked. This book focuses on the attitude of Vietnam towards the South China Sea dispute. It examines the position from a historical perspective, shows how Vietnam's position is affected by its wish to maintain good relations with China on a range of issues, and outlines how Vietnam has occasionally made overtures to both the United States and Japan in order to bolster its position, and considered the possibility, so far resisted, of taking China to formal arbitration under the auspices of the United Nations Convention on the Law of the Sea. The book concludes by assessing the future

Download File PDF Geography Paper 1 June 2010 0460 12

prospects for Vietnam's position in the dispute.

This is the first title in a new series of volumes examining different dimensions of the media and culture in small nations. Whether at a local, national or international level, radio has played and continues to play a key role in nurturing or denying – even destroying – people's sense of "belonging" to a particular community, whether it be defined in terms of place, ethnicity, language or patterns of consumption. Typically, the radio has been used for purposes of propaganda and as a means of forging national identity both at home and also further afield in the case of colonial exploits. Drawing on examples of four models of, the chapters in this volume will provide an historical and contemporary overview of radio in a number of small nations. The authors propose a stimulating discussion on the role radio has played in a variety of nation contexts worldwide.

Turkey's economy is a complex mix of modern industry, a traditional agricultural sector, and a rapidly growing private sector. At the same time the country is positioning itself and preparing for entry into the European Union. That Turkey should meet her national economic goals is, therefore, particularly important. A vital factor in achieving these will be the country's regional economies and their associated economic policies. To date, however, many of the policy interventions adopted have been based on models drawn from developed economies and the outcome has raised a number of concerns. Are policy interventions drawn from advanced economies appropriate for transitional economies such as Turkey? Aksel Ersoy's book is the first work to explore the dynamics of local and regional development in Turkey. In addition, he offers a new theoretical framework for understanding the local and regional dynamics of emerging and transitional economies more generally.

The Politics of Expertise offers a challenging new interpretation of

Download File PDF Geography Paper 1 June 2010 0460 12

politics in contemporary Britain, through an examination of non-governmental organisations. Using specific case studies of the homelessness, environment, and international aid and development sectors, it demonstrates how politics and political activism has changed over the last half century. NGOs have contributed enormously to a professionalization and a privatization of politics, emerging as a new form of expert knowledge and political participation. They have been led by a new breed of non-party politician, working in collaboration and in competition with government. Skilful navigators of the modern technocratic state, they have brought expertise to expertise and, in so doing, have changed the nature of grassroots activism. As affluent citizens have felt marginalised by the increasingly complex nature of many policy solutions, they have made the rational calculation to support NGOs, the professionalism and resources of which make them better able to tackle complex problems. Yet in doing so, support rather than participation becomes the more appropriate way to describe the relationship of the public to NGOs. As voter turnout has declined, membership and trust in NGOs has increased. But NGOs are very different types of organisations from the classic democratic institutions of political parties and the labour movement. They maintain different and varied relationships with the publics they seek to represent. Attracting mass support has provided them with the resources and the legitimacy to speak to power on a bewildering range of issues, yet perhaps the ultimate victors in this new form of politics are the NGOs themselves.

This book is a comparative study of organized crime groups from five different parts of the world: Europe; North America; Central America/South America/Caribbean basin; Africa; and Asia/Western Pacific. Each part contains two case studies and a shorter essay, a vignette. From Europe the case studies focus on the Italian mafias and the Russian mafia; the vignette, on the Albanian mafia. From North America the case studies highlight the US Mafia and the

Download File PDF Geography Paper 1 June 2010 0460 12

Mexican drug cartels; the vignette, organized crime in Canada. From Central America/South America/Caribbean basin the case studies concentrate on the Colombian drug cartels and gangs of the Caribbean; the vignette, on organized crime in Cuba. From Africa the case studies examine resource wars and Somali piracy; the vignette, relations among international drugs trafficking, organized crime, and terrorism in North and West Africa. And from Asia/Western Pacific the case studies spotlight the Chinese Triads and Japanese Yakuza; the vignette, relations among international drugs trafficking, organized crime, and terrorism in Afghanistan. Written in non-specialist language, *An Economic History of Organized Crime* provides an original overview of a crucial problem of our times: the growing scourge of global organized crime. This book can be read with profit by the general public, but it also has value for academic specialists and professionals in law enforcement.
