Study & Master Mathematical Literacy Grade 11 has been especially developed by an experienced author team according to the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Mathematical Literacy. The comprehensive Learner's Book includes: \* thorough coverage of the basic skills topics to lay a sound foundation for the development of knowledge, skills and concepts in Mathematical Literacy \* margin notes to assist learners with new concepts - especially Link boxes, that refer learners to the basic skills topics covered in Term 1, Unit 1-16 \* ample examples with a strong visual input to connect Mathematical Literacy to everyday life.

This thesis emerges from an analysis of learners' responses to tasks presented to learners studying Mathematics and Mathematical Literacy in South Africa. Officially, Mathematics and Mathematical Literacy are two separate learning areas. Learners from Grade 10 onwards take either one or the other but not both. This means that there is a potential that by the time learners reach Grade 11, they would have acquired different kinds of knowledge and problem solving skills depending on which of these they take. Hence the study sought to investigate Grade 11 learners' approaches to solving context-based Mathematics and

Mathematical Literacy tasks. The study was driven by the following key research questions: How do Mathematics learners interact with Mathematical Literacy tasks? How do Mathematical Literacy learners interact with Mathematics tasks? When given a Mathematics task, what variations, if any, exist in the solution strategies of Mathematical Literacy learners and vice versa? What are teachers and facilitators' views on Mathematics and Mathematical Literacy learners' solution strategies?

Lessons from the Kalahari: Tracking Teachers' Professional Development explores how Northern Cape teachers, who were enrolled in a Bachelor of Education (in-service) course, responded to three professional-development modules specialising in mathematics education, English language teaching, and Foundation Phase teaching, respectively. Mainly through fine-grained analyses of their classroom practice, the studies in this volume demonstrate how these teachers grappled with new content knowledge and pedagogical innovations to improve the quality of teaching in their classrooms. The chapters include case studies that range across a variety of pedagogical topics, including mathematics and English teachers' classroom practices, involvement of parents of Foundation Phase learners, and learners' autonomous mathematics learning. The book makes an original, empirically-based contribution to the understanding of the challenges confronting primary and secondary school teachers in remote rural parts of Northern Cape

Study & Master Mathematical Literacy Grade 10 has been especially developed by an experienced author team according to the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Mathematical Literacy. The Teacher's File includes: \* a weekly teaching schedule, divided into the four terms to guide the teacher on what to teach \* extra project templates for teachers to choose from \* solutions to all the activities in the Learner's Book.

Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice. Focussing its discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial effects on learning and teaching, the question of how these effects are to be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of data, collected in a South African mathematics classroom. In the second part, each of these teams makes a specific proposal about what can be

done and how so that its research-generated insights have a tangible, beneficial impact on what is happening in mathematical classrooms. Combining two discourses – that of researchers speaking to one another, and that of researchers communicating their insights to those responsible for educational practice – the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education, educational research and classroom practices. This book will be key reading for postgraduates, researchers and academics in education and particularly in the areas of mathematics education, education research, teacher education and classroom practice. It will also appeal to teacher educators, practitioners and undergraduate students interested in educational research.
