This book adheres to the B.Tech. and MCA syllabus of JNT University, Hyderabad and many other Indian universities. The first two chapters represent the fundamentals of object technology, OOP and OOAD and how people are inclined towards object-oriented analysis and design starting from traditional approach and the different approaches suggested by the three pioneers-Booch, Rum Baugh and Jacobson. Chapters 3 to 18 represent the UML language, the building blocks of UML i.e., things, relationships and diagrams and the use of each diagram with an example. Chapters 19 and 20 discuss a case study "Library Management System". In this study one can get a very clear idea what object oriented analysis and design is and how UML is to be used for that purpose. Appendix-A discusses the different syntactic notations of UML and Appendix-B discusses how the three approaches of Booch, Rum

Software architecture—the conceptual glue that holds every phase of a project together for its many stakeholders—is widely recognized as a critical element in modern software development. Practitioners have increasingly discovered that close attention to a software system ' s architecture pays valuable dividends. Without an

architecture that is appropriate for the problem being solved, a project will stumble along or, most likely, fail. Even with a superb architecture, if that architecture is not well understood or well communicated the project is unlikely to succeed. Documenting Software Architectures, Second Edition, provides the most complete and current guidance, independent of language or notation, on how to capture an architecture in a commonly understandable form. Drawing on their extensive experience, the authors first help you decide what information to document, and then, with guidelines and examples (in various notations, including UML), show you how to express an architecture so that others can successfully build, use, and maintain a system from it. The book features rules for sound documentation, the goals and strategies of documentation, architectural views and styles, documentation for software interfaces
