It's the Roaring Twenties in foggy San Francisco. Prohibition is on, inhibitions are low, and dark magic is rolling into town... Archaeologist Lowe Magnusson is packing something everyone wants. The djed amulet, a priceless Egyptian artifact, will fetch Lowe a hefty paycheck from one of San Francisco's wealthiest. But when the handsome Swede runs into his patron's uptight daughter, what he once considered easy money becomes maddeningly complicated... Cursed with deadly spirits as her constant companions, curator Hadley Bacall must keep calm to hold her dangerous specters at bay and prevent them from lashing out at anything—or anyone. Trouble is, Lowe is driving her crazy, but her father needs the artifact he's transporting. While Hadley can feel the amulet's power, she can't fathom the destruction—or the desire—it's about to stir up.

Stochastic processes are tools used widely by statisticians and researchers working in the mathematics of finance. This book for self-study provides a detailed treatment of conditional expectation and probability, a topic that in principle belongs to probability theory, but is essential as a tool for stochastic processes. The book centers on exercises as the main means of explanation.

This book is designed to serve senior-level engineering students taking a capstone design course in fluid and thermal systems design. It is built from the ground up with the needs and interests of practicing engineers in mind; the emphasis is on practical applications. The book begins with a discussion of design methodology, including the process of bidding to obtain a project, and project management techniques. The text continues with an introductory overview of fluid thermal systems (a pump and pumping system, a household air conditioner, a baseboard heater, a water slide, and a vacuum cleaner are among the examples given), and a review of the properties of fluids and the equations of fluid mechanics. The text then offers an in-depth discussion of piping systems, including the economics of pipe size selection. Janna examines pumps (including net positive suction head considerations) and piping systems. He provides the reader with the ability to design an entire system for moving fluids that is efficient and cost-effective. Next, the book provides a review of basic heat transfer principles, and the analysis of heat exchangers, including double pipe, shell and tube, plate and frame cross flow heat exchangers. Design considerations for these exchangers are also discussed. The text concludes with a chapter of term projects that may be undertaken by teams of students.
