Description: limit switch SVK-3-PK-3 With ball actuator Valve function=3/2 closed, monostable, Type of actuation=mechanical, Standard nominal flow rate=50 l/min, Operating pressure=-0,9 - 8 bar, ...

End Stop Switches

Description: limit switch SVK-3-PK-3 With ball actuator Valve function=3/2 closed, monostable, Type of actuation=mechanical, Standard nominal flow rate=50 l/min, Operating pressure=-0,9 - 8 bar, ...

For Stirling engines to enjoy widespread application and acceptance, not only must the fundamental operation of such engines be widely understood, but the requisite analytic tools for the stimulation, design, evaluation and optimization of Stirling engine hardware must be readily available. The purpose of this design manual is to provide an introduction to Stirling cycle heat engines, to organize and identify the available Stirling engine literature, and to identify, organize, evaluate and, in so far as possible, compare non-proprietary Stirling engine design methodologies. This report was originally prepared for the National Aeronautics and Space Administration and the U. S. Department of Energy.

Semiannual, with semiannual and annual indexes. References to all scientific and technical literature coming from DOE, its laboratories, energy centers, and contractors. Includes all works deriving from DOE, other related government-sponsored information, and foreign nonnuclear information. Arranged under 39 categories, e.g., Biomedical sciences, basic studies; Biomedical sciences, applied studies; Health and safety; and Fusion energy. Entry gives bibliographical information and abstract. Corporate, author, subject, report number indexes.

Companies traded over the counter or on regional conferences.
