Foreword by Dr. Asad Madni, C. Eng., Fellow IEEE, Fellow IEE Learn the fundamentals of RF and microwave electronics visually, using many thoroughly tested, practical examples RF and microwave technology are essential throughout industry and to a world of new applications—in wireless communications, in Direct Broadcast TV, in Global Positioning System (GPS), in healthcare, medical and many other sciences. Whether you're seeking to strengthen your skills or enter the field for the first time, Radio Frequency and Microwave Electronics Illustrated is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify analysis of complex design problems Key design

Microwave Integrated Circuits (MICs) Novel use of "live math" in
circuit analysis and design Dr. Radmanesh has drawn upon his many
years of practical experience in the microwave industry and
educational arena to introduce an exceptionally wide range of
practical concepts and design methodology and techniques in the most
comprehensible fashion. Applications include small-signal, narrow-
band, low noise, broadband and multistage transistor amplifiers; large
signal/high power amplifiers; microwave transistor oscillators,
negative-resistance circuits, microwave mixers, rectifiers and
detectors, switches, phase shifters and attenuators. The book is
intended to provide a workable knowledge and intuitive understanding
of RF and microwave electronic circuit design. Radio Frequency and
Microwave Electronics Illustrated includes a comprehensive glossary,
plus appendices covering key symbols, physical constants, mathematical
identities/formulas, classical laws of electricity and magnetism,
Computer-Aided-Design (CAD) examples and more. About the Web Site The
accompanying web site has an "E-Book" containing actual design

In 1986 Frank Davis wrote his first poem. His thoughts were of our attitudes toward the Indians and how we infringed on their territories and lives. Most movies depict the Indian as bad and we were led to believe they were our enemies. Reading more realistic books gave him a different view. In many instances the Indians were friendly and helped pioneers in stress. In two of his poems he brings out his own version of their real struggles of the invasion of the white man, to be outnumbered and controlled in a no-win situation. Then his thoughts of his childhood and memories of growing up, his slant on life and visions in a folklore atmosphere. His love and feelings of life and mother nature, to read his poetry will acquaint us with the Inner person and will remind us of ourselves in many ways. His first twenty poems were recorded and a friend listened to that first tape and exclaimed, 'Frank, it's just like being there,' hence the name Just Like Being There. In 1993 he married his best friend and was inspired to try writing lyrics to show his true colors to her. She is his biggest fan and finally someone to add rhythm to his life. Maybe some time in the future, one or two of his lyrics will be put to music.
