Nature is not just close at hand to the residents of and visitors to Portland, Oregon; its fundamental to the city and to the way of life. From salmon fishing in the Willamette and the Columbia rivers to skiing majestic Mt. Hood and Cascade Mountain ranges; from biking in Forest Park to beach combing on Cannon, Portland offers something for every outdoor enthusiast. But this popular city also boasts a rich cultural life: the Portland Art Museum, the zoo, the Oregon Museum of Science and Industry, the Oregon Symphony, and Powells Bookstores all call Portland home. M. J. Cody and Rick Schafers "Our Portland" celebrates this popular and "very livable" Pacific Northwest city by combining spectacular photographs of major attractions and lush nature scapes with detailed captions. Rick Schafers is a Portland-based freelance photographer who specializes in large and medium format scenic photography. His work has appeared internationally in a variety of advertising and editorial applications.

The Horten Brothers and Their All-Wing Aircraft is the heretofore untold true story of Reimar, Wolfram, and Walter Horten's remarkable aeronautical achievements with the all-wing planform between 1933 and 1945 as told to aviation biographer David Myhra. Talking daily with Reimar Horten at his ranch at the foothills of the Andes Mountains in Argentina for two months, and also with Walter in Baden Baden, Germany, the two brothers described in detail their struggles in Nazi controlled Germany to perfect the all-wing planform. Astounding as their real-life story is of itself, the Horten brothers gave David Myhra hundreds of photographs to illustrate this new volume. In this remarkable book David Myhra tells the true story of the Horten brothers and their all-wing aircraft through the use of over 735 photos and three-view line drawings of their entire all-wing line. Most of these photos and drawings have not been available to the public until now. Even more astonishing, the Hortens, ridiculed in the mid-1930s for wasting their genius on silly all-wing aircraft, would be the only ones called on by Hermann Goring in December 1944 to build an all-wing "Amerika" atomic bomber and save Deutschland from certain and final destruction by the Allies through a negotiated peace settlement. The Horten Ho 18 "Amerika Bomber" was not meant to be. But it might have been if the war had not ended in May 1945 but, say, May 1946. This, then, is the fascinating true story of those naive boy-designers from Bonn, the Horten brothers and their silly all-wing airplanes. AUTHOR:

Charity Sanderson had been Beau Parrish's lover for months, but she knew it was only a matter of time before their affair ended. She needed a man she could count on to be there, and Beau never took anything seriously. Beau loved Charity more than his own life, but knew she didn't believe that. Every time he spoke about a future together, she got skittish, and so he'd had to back off for fear of losing her completely. After giving her an ultimatum he walked out, hoping she would love him too much to let it end between them. Her accident changes everything. It forces her to see that the man she never thought he could be has been there the entire time.

'Blew my mind... so magically written and most of all that it is based on true events... a hard-hitting, soul-crushing book... I loved every moment of it... immersive, heart-wrenching, I feel emotional writing this review.' Goodreads reviewer, 5 stars Wanted: Company Daughters. Virtuous young ladies to become the brides of industrious settlers in a foreign land. The Company will pay the cost of the lady's dowry and travel. Returns not permitted, orphans preferred. Amsterdam, 1620. Jana Beil has learned that life rarely provides moments of joy. Having run away from a violent father, her days are spent searching for work in an effort to stay out of the city brothels, where desperate women trade their bodies for a mouthful of bread. But when Jana is hired as a servant for the wealthy and kind Master Reynst and his beautiful daughter Sontje, Jana's future begins to look brighter. Then Master Reynst loses his fortune on a bad investment, and everything changes. The house is sold to creditors, leaving Jana back on the street and Sontje without a future. With no other choice, Jana and Sontje are forced to sign with the East India Company as Company Daughters: sailing to a colonial Dutch outpost to become the brides of male settlers they know nothing about. With fear in their hearts, the girls begin their journey - but what awaits them on the other side of the world is nothing like what they've been promised... Based on

true history, this is a gripping and unputdownable historical novel, perfect for fans of *Girl with a Pearl Earring*, *The Miniaturist* and *The Indigo Girl*. WINNER OF THE 2021 GOLDEN CROWN LITERARY SOCIETY AWARD FOR DEBUT FICTION. FINALIST FOR THE 2021 BISEXUAL BOOK AWARDS. LONGLISTED FOR THE 2021 HWA DEBUT CROWN AWARD. What readers are saying about *The Company Daughters*: 'Blew my mind... a book I've told so many people about purely because I'm still in disbelief that it exists, that it's so magically written and most of all that it is based on true events... a hard-hitting, soul-crushing book of a woman's struggle to survive... I loved every moment of it. Breathlessly, and in a way that took up my entire brain... immersive, heart-wrenching, and I feel emotional writing this review.' Goodreads reviewer, 5 stars 'From the moment I started reading *The Company Daughters*, I was captivated by this historical tale. Although it does contain a love story, it's not a romance...This was a gripping read.' Goodreads reviewer 'This book is so stunningly tender and beautiful, all mixed in with some seriously tragic and heart-wrenching events... Rajaram is an extremely skilled writer, and I love her writing style... The themes of sisterhood and female love were so present in this book and I found it very moving.' Goodreads reviewer 'I was enchanted by this book! It's a delightful read that will have your emotions all over the place.' Goodreads reviewer 'I love historical fiction, and this book touched on a topic and time I knew nearly nothing about...There's love, there's loss, there's surviving, there's thriving... It was a very beautiful book.' Goodreads reviewer 'The *Company Daughters* is a beautifully written love story... a perfect example of the power of human will and the endurance and hope that love can give a person.' Goodreads reviewer, 5 stars 'This book has a beauty and grace to it. The author's writing just flows off the page, and although there are struggles and upsets by the time you close the book over you are filled with a warm glow.' Goodreads reviewer 'A powerful and insightful read. I look forward to reading more historical work by Samantha Rajaram!' Goodreads reviewer 'Heartbreaking... a moving book... vivid, with amazing characters... This is a great read.' Goodreads reviewer

Massively parallel processing is currently the most promising answer to the quest for increased computer performance. This has resulted in the development of new programming languages and programming environments and has stimulated the design and production of massively parallel supercomputers. The efficiency of concurrent computation and input/output essentially depends on the proper utilization of specific architectural features of the underlying hardware. This book focuses on development of runtime systems supporting execution of parallel code and on supercompilers automatically parallelizing code written in a sequential language. Fortran has been chosen for the presentation of the material because of its dominant role in high-performance programming for scientific and engineering applications.

This dissertation addresses emerging developer communities in a new field of science and technology as well as methods to capture exchange processes between them. It contributes to the discussion about a new mode of knowledge production and a changing division of labour between public research, industry, and government by investigating 'nanotechnology' - an emerging area between science and technology. To explore exchange processes in this field, the study applies various methods. In particular, it uses patent citation analysis. The methodological contribution is a new interpretation of this indicator, which sees patent citations as information flows that point to reciprocal exchange processes and potential overlaps between science and technology. This is in contrast to the received interpretation, which suffers from the application of a framework that was developed in the context of scholarly citation and does not fully appreciate that a patent citation is established by the patent examiner - a party external to the inventive process. Various formats of patent citation analysis describe 'nanotechnology' as a set of instrument-driven scientific fields on their way towards science-related technologies. Even though nanotechnology patents contain more patent citations to the scientific literature than other technical fields, the science and technology systems are relatively autonomous. What links them in the case of nano-science and technology is a common interest in improving techniques of nano-scale measurement and manipulation. Another finding is that both countries and firms exhibit relatively strong path-dependencies. While nanotechnology comprises a key set of technological areas - instrumentation, electronics, and pharmaceuticals/chemicals - nano-scale activities vary considerably from country to country. Also knowledge-building activities of firms follow a strong technological path-dependency. As a result, 'social capital' seems to be confined to chiefly technological or scientific trajectories. Hence, 'social capital' appears not to be very useful in explaining how knowledge is accumulated and integrated at the nano-scale. Given the central role of instrumentation and the mediated nature of exchange between science and technology at the nano- scale, public policies should be directed towards supporting education and infrastructure in the area rather than more 'direct' transfer mechanisms.

Describes the intellectual journey of eccentric American genius George Price, who tried to answer the evolutionary riddle of why people are nice, and eventually gave away all his belongings and took his own life in a squatter's flat.
